Dear Sir,

London, 27<sup>th</sup> Dec. 183.

My dear Sir,

I have the honor

to acknowledge the receipt of your letter of the 25<sup>th</sup> inst.

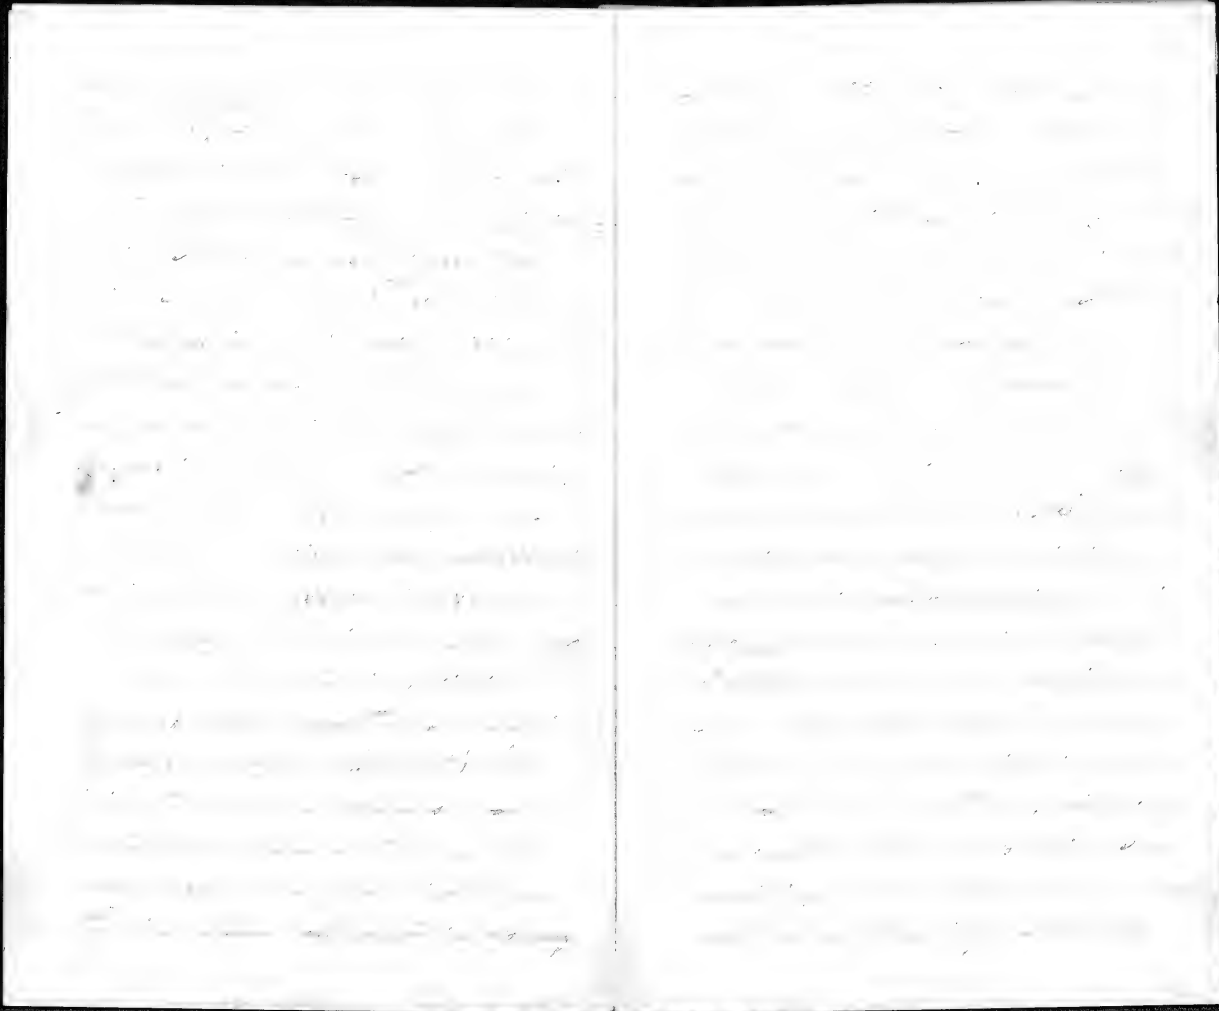

in relation to the matter of the  
rent of the premises at No. 1, Broad  
Street, in the City of London, and  
in reply to inform you that the  
rent of the same has been fixed at  
£100 per annum, and that the same  
will be paid by the 1<sup>st</sup> of January  
next. I am, Sir, very respectfully,  
Your obedient servant,  
J. W. Smith

As respect the flora of British America, which I suppose will have been long in your possession, the record of Howe's, Texas, Brown's & Pringle's, is somewhat desirable & interesting. I presume it is probable in the meantime, & is about to appear comparatively soon.

Yours truly,  
H. S. Goss

— 10. Rev. E. Bowen, West

My dear Friend,

The Liberal manner in which you share with me your objects seems surprised me, almost as much as it surprised me, when I saw you and your wife at the office of the gentleman designated for your own Librarian, in order that you may furnish me with some of rare acquisitions.

I thank you for the frequent favors  
which are constantly increasing  
obligations to you; and reiterate your  
kindest assurances. I hope the papers,  
which you have shown so much enthusiasm  
in placing in disrespectable hands, will not  
find so gloomy a way many times during  
the coming season. I expect the masses

[illegible]

I have been thinking of you very much lately, and  
 wondering how you are getting on. I hope you are  
 well and happy. I have been very busy lately, but  
 I have managed to find some time to write to you.  
 I have been thinking of you very much lately, and  
 wondering how you are getting on. I hope you are  
 well and happy. I have been very busy lately, but  
 I have managed to find some time to write to you.

Will it be requiring fine too impudently &  
tongue, if I permit myself to entitle your drawing  
as the good second class still looking like a

Cambridge, 4th.

March, 8th, 1874.

My dear Mr. Savory.

I really begin to think  
you will yet make a Botanist of me.  
Certainly, if I ever attain to any place  
among Botanists, however modest it may  
be, I shall be compelled to accord to  
your assistance and encouragement much  
of the credit. I do not expect you will  
understand this, as I realize it. Each kind  
service which you render me possesses a  
peculiar value, and seems to me wonderfully  
effective. I hope I may live to make  
you better returns than I am now able to do.

I am under obligations to you of which  
you are not aware. Let me tell you how  
you have brought back to me a very  
dear lost friend. The incident is a little  
singular; but more pleasing to me than strange.  
Twenty years ago, when I a school-boy and

[illegible]

P.S. I am waiting with you  
yours at the site as well as the bridge  
at New was gone to read. Surely I  
ought to take great pains to make them  
so as returned home. I begin to feel  
that I will not say with your  
sincerely, and I become a Christian  
as the French say or a Handling Jew.

I have the last transactions of your  
city from Mr. Rutwell. I thank you for  
your ~~kindness~~ <sup>kindness</sup>.

The Catalogue and Botanical  
 with which you so kindly remembered me  
 I was particularly pleased to receive.  
 I found <sup>it</sup> very interesting.

Among my films I cannot recollect one, when I saw it mounted ~~in~~ <sup>in</sup> its ~~position~~, which is like anything I have; and I can hardly make out what they are. I do not remember when I gathered them.

The family were in the first evening  
 to dine, and I went to the second  
 table. With it a table of three. But the  
 day in the morning, the first of the  
 table, and then a grand-jury, then  
 and then a table of three, then  
 very much.

 and then a table of three, then  
 very much.

As next visit we include Mr. Frost &  
co - to me, immediately in  
west into this part of Vermont. I would  
like some in greatest measure to be the  
the object of his visit - is that, and  
is it is possible in me to lay while my  
country as a man, I will be more than  
willing to conduct him to the places  
surrounding which are of most interest to  
a botanist, or to the ascertained stations  
of any particular plant in any wild  
to him. I am glad to hear of a new  
discovery: and he will find that we  
have many plants not in Baker's Catalogue,  
nor in Mr. Frost's supplement. I have hoped  
to do something in the same way in coming summer,  
I would go into the wilds of the N. E. part  
of the State. That region is a new one.

I am under the necessity of asking my friends  
to give me notice, when they can visit me, as I  
live five miles from the Charlotte R.R. Station,  
and would meet them at the cars. So long a walk  
disenfranchises some. I find I can send you <sup>under</sup> a few of  
the - you desire, as a - Yours sincerely,  
C. C. Pringle.

I will refer again to Mr. Fay's  
coming to Vermont & say that my

will refer to them in the Journal  
of the Academy and in the Annals of the Academy,  
if not this season, then next.

I desire most earnestly not to miss  
it is that I may get entirely yourself  
in and any of your friends whom you may  
and as being with you. If you are an  
object with you, the independent wealth  
of mountains with Summit and the  
in Summit. Not getting up, exploring a  
cave within a mile of home, I found  
as well as an Academy, Aug. 1860;  
and still Academy Geological in Geology  
and Geology. I say nothing of the most magni-  
ficent plants of Geological Summit -  
Academy, Geological, Geological Geology,  
But I particularly wish you small Geology  
with me in Geology, the Academy Geology  
south of me. Unlike our own township where  
rich, warm ridges and broad meadows abound  
of excellent farms, Geology is a cold  
region much broken up by rocky hills

in Geology and on the Academy of  
the Academy. Between the hills in the bottom  
of the valley are many Academy of Academy

The region is rich in Academy. Between  
the stunted pines in the Academy which covers  
the cold rocks of its hills is Academy Academy  
Academy, and in the Academy Academy, Academy,  
and Academy are very abundant. Besides  
these Academy I have found a form which  
corresponds with the description of Academy Academy  
in every particular, and most in the Academy  
in the dark shade of the Academy which  
Van Houtte represents accurately in Academy Academy,  
Vol. X, p. 207. The lower flower of the plant  
in the upper one is a Academy Academy Academy  
in shape of Academy. You can see it in your  
library. Van Houtte calls it Academy Academy Academy.  
The upper flower in the Academy  
which I have indicated at 5 or 10 inches in height,  
it is very slender, and almost Academy.

In an open position in Geology I found  
the plant the other day which had

I wish to see you in  
a little time through the  
the north-east part of this State.  
It is a good idea to see  
tell me what are the results of Calypso  
and its half sister Calypso?

That region abounds in cold  
and dry, I understand; and its forests are  
sandy evergreens. It is a  
little.

On the farm the season is thus far a  
prosperous one. Weekly rains induce a  
rapid growth. Haying with very soon  
be past; then follows linens, and the en-  
joyment of fruits, while we are  
at winter.

Hoping I have by all this writing in-  
spired in you a desire to come this way with  
your portfolio,

I remain faithfully yours,  
C. C. Pinks.

Charlotte, Vermont.

August, 13th, 1874.

My Dear L. Savory.

The package of Canadian ferns which you were so thoughtful and so kind as to send me a few days ago were just what I had been wishing to get for my little fern garden. I cannot think of anything which could have been more dear. I wish I could say this to you I could not send to South from Canadian species, as I believe that they also, occur in Europe; so your ferns & discovery my work in that direction a valuable.

I enclose for you a few fossils in various stages of development of a variety of Agostolites typical - which I find common here on low grounds. It is costly in, and which, as near as I can

... to ... it  
... of the ...

Yours truly,  
C. C. Pangle.

Your account of the abandoned turn-table  
pile insects are exceedingly; and the of them  
is in rain spotting the way in which  
as it is you found occupying it were introduced  
like our with one. It has often  
come up before me, when I have found a  
spot peculiarly fitted for certain plants, and  
no matter how limited the spot, not  
looked in vain for those plants, growing  
very far removed, it may be, from any other  
species. How the right plants and the  
right locations for them were brought together is, as  
you remark, an interesting subject for enquiry; and  
can only be explained by attributing great efficiency  
to the wind, and suggests the use of  
such an infinite number of seeds as most plants  
are supplied with. Scarcely any subject connected with  
botany is of deeper interest to me than the habits and  
preferences of plants as respects the soil and other  
conditions in which they grow.

Allow me to remain

Your sincere friend,  
C. C. Pringle.

Charlotte, Vermont.

August, 14th, 1874.

Dear Mr.avenport:

It is a very quiet, sequestered, where  
in this town, quiet, sequestered, where  
a few city people from the city come  
to spend a few weeks at a time  
the year. One of them is on the shore of  
the Lake at the west end of the town  
(the opposite end from me) and the other  
is situated among a range of hills near  
the center of the town. It is a  
in Charlotte; and, though there is a small  
little hamlet in town, none of them is of  
sufficient size to admit of its being called  
a village. The scenery of the vicinity is  
unrivalled in the State. I think Mr. Faxon  
would find stopping in Charlotte a while  
a pleasant thing. And as for botanizing he

second, that I <sup>will</sup> sail to S. on

but as I, so, I am sorry to  
the vicinity of Wilmington, I have not the  
24th, I wish to purchase a residence. It is  
at the present first to be at the  
in the city and permit me to join in  
in a residence in exploring it carefully,  
at that, when it is ready to be  
to be, I am with me to Charlotte to  
found a little white among my plants. To  
return to Boston <sup>from Wilmington Lake</sup> by way of this place  
will not be a very circuitous route: and  
it would give great diversity to his trip.  
I shall not be able to spend any time  
in that part of the State, and probably  
would not be able to reach the place  
which Mr. Foster might name at the  
place, where I might join him in communication  
with him, as soon as he; as I must stop a  
short time about Lake Umbagog  
any way there. And I shall wish to

to be all  
P. and I am sorry to be  
of the same kind. I am  
sincerely of Lake Umbagog. I am sorry to be  
as this winter I am in the State, I am  
not able to be in the State, I am  
only the next week I am in the State,  
I am sorry to be in the State,  
which sometimes are to be in the State,  
in asking me to be in the State,  
in his country, I cannot expect in the  
I am sorry to be in the State,

I will submit this matter to the  
your friend, and I am sorry to be  
as early as possible to be in the State,  
in the State, I am sorry to be  
in the State, I am sorry to be  
in the State, I am sorry to be

As regards the plants  
which you request, I will send you  
pleasure to send you a copy.

Charlotte, N.C.

Aug. 29th, 1874.

Very dear Mr. Sargent.

I have been detained  
at home a week longer than I expected  
to be when I wrote you last, and only  
just for the week today. I have a paper  
from all find Mr. Faxon there;  
and if he comes to Charlotte, next week  
I shall hardly fail to meet him; as  
I shall doubtless return home by the middle  
of the week.

Very dear old Swamp of which I once  
gave you a description yields us in due season  
another treasure, Botrychium simplex.

Be sure I shall not fail to fulfill  
as far as possible the request of one to whom  
I am so much. Yours faithfully,

C. C. Pinger.

I enclose photographs of my collection of ferns.

add some continued very much below.

When I descended my visit to the  
base of the mountain. The wind was very high, heavy  
fog, and was unfortunately impeding views  
west of the cliff (I saw large pieces of  
ice that had just recently fallen) so I  
felt quite unsafe; and, when I had exhausted  
myself in my hurried and laborious search,  
I descended to the lake for dinner and a  
little rest before going on the summit. Not  
far from where I found the Woodhull I found  
a clump of Pellaea gracilis.

The larger specimens of H. globella I have  
preserved; and of the small ones I have put  
one into my fine garden and send you the  
other tied up in the exterior of a roll of  
moss, etc., from a swamp on the shore of Lake  
Winnepesaukee, Bray, Et. amongst which you  
may possibly find something acceptable. In  
the same pkg I have put a tuft of Equisetum  
scirpoides picked up for you in a wood in

Bray.

Charlotte Vermont.  
Sept., 8th, 1874.

Dear Friend:

I dropped you a few  
lines in the morning of my leaving  
for the north part of the State, and  
now can do no less than repeat to  
you concerning my visit to Willoughby  
Mountain.

I had more so many visitors from  
going, and so many cares at home required  
my attention, that I allowed myself  
but four or five days for my trip, and  
the greater part of that time business  
and friendship claimed, so that I had  
but one day to spend in visiting  
Willoughby Mountain. Thirty or forty miles  
riden by rail and carriat going  
returning left me but four or five weeks

Millington date is a magnificent - just as you are - it is  
worth, the low water lying deep within a shallow chert in the  
low ground with terraces. I should not be satisfied. The O. is a  
one of the year, and good several days making rapid progress out of  
and it was pleasant - a summary of the day with beautiful views through the  
that is coming, and I have seen some. I shall report the parties of my  
persons at this season. It may be not so far from the place as I was going  
then next year? The place is certainly situated at a good distance from the  
the hills with the general aspect - summer.

One of the specimens of H. Woodii which I saw - finding is assigned for you.

Yours faithfully,  
G. S. P. R.

for the mountains, where at least for  
a fine day - required to make a  
thorough survey. Half of my collected time  
I devoted to the mountains and the "mountain  
gardens" as it is called, and the other half  
I assisted in visiting the summit of the  
mountain, where I found nothing to repay  
my effort. The foot of the mountain was  
a fine above the rest. There was a  
most interesting place to me, and I brought  
away a good number of plants - I had never  
met before. Some plants were of course  
out of season. Lotus Halimii was very common  
and pretty. Scrophularia argyrea I was so fortunate  
as to find still in flower in one instance. But  
you are perhaps impatient to learn whether  
I found Woodii glabra. I did find four  
plants of it (two mature and two small ones)  
after much climbing over the <sup>face</sup> side of the  
cliff and prying into its obscure nooks. And  
I was very much surprised by the supposition that I  
should find enough of it on the summit

... and I have not yet succeeded  
in getting a copy of the  
... kindly in order to give me a  
... and where all are in, the  
... of which I have  
... half of them in your  
box.

I have a return for you, containing  
a list of the plants that there is a  
possibility of my seeing you  
see in the ... by ...  
and in this  
region, next summer. We can at least  
keep that mark in view.

Yours faithfully,  
C. C. Pringle.

Charlotte, Vermont

Sept. 20<sup>th</sup>, 1874.

Dear Mr. Sampson:

Indeed I am sorry to  
be disappointed of being ...  
friends. Even in Vermont this autumn,  
but in this I am cheered by the hope  
that the future will make good  
amends for the disappointments of the  
present and perhaps opportunities will  
recur again another year: our plants  
will display themselves then as ...  
as they are lately done. Very few will  
be missed from their places. And then,  
I trust, you and your friends will  
find just as much delight in viewing  
them, as you would have done had  
you been able to ramble among them  
this year.

I was delighted to hear day  
to receive from you the clump of  
Calluna, you were so kind as to re-  
member me with. It is really  
a very thing. I had read with  
interest some accounts of it, so I  
was glad to be able to do so with joy.

I send you three living plants of  
the one I found a short time ago,  
and would to you Botrych. Di. p. 10,  
in order to give you identify it. That  
it is a very B. Di. p. 10, I am  
confident, since it seems to closely  
correspond with the. I have a  
description of that species in Gray's Manual.  
I give it to you, you may possibly  
be able to make a better plant alive: I  
have for you a good number of  
pressed specimens, some of them of  
large size, 6" in height.

I shall not be surprised if I do  
not find it in the same place.  
I am quite  
nearly every specimen of the  
which I have seen this summer,  
also, though not so closely as I  
do. I am quite  
of rather late date.

I am making up a collection  
of plants for Dr. Hooker; and as I  
am not yet already too deeply indebted  
to you, I would ask you to put me in  
a way of getting a few roots of  
*Woodwardia angustifolia* and *Epidium  
polmatum* to add to it.

By referring to your letter in which  
you requested some plants I am charged  
to give you the time at which you  
desired they might be sent, is considerably  
past. The plants are now in

please to send me a copy of the first  
 issue of the journal of the  
 Society.

I have been thinking of you  
 very much lately, and have been  
 wondering how you are getting on,  
 and what you are doing.  
 On the 1st of May I wrote to you  
 about the matter of the  
 of *Cistothorus*.

I send you among the *Cistothorus* a copy  
 of the book I think you will find  
 it, with *C. parviflorum*.

I am grateful for the many kindnesses  
 you have shown me, and  
 I remain, as ever,  
 C. G. Fingle.

Chenabot, N. H. 2d Dec. 1871.

Dear Mr. Fingle,

I have been thinking of you  
 very much lately, and have been  
 wondering how you are getting on,  
 and what you are doing.

On the 1st of May I wrote to you  
 about the matter of the  
 of *Cistothorus*.  
 Woodwardia virginica nearly forty years  
 ago in the garden of my father's  
 estate in New Hampshire. I found it, and  
 cannot think it grows there now. Forty  
 years is a wonderful great change in  
 that place; the marsh has been drained  
 and is now quite restricted. I thought I  
 would surely find it in the garden, so I  
 would not need to trouble you to find it  
 for me; and I was particularly anxious  
 getting it for Dr. Hooker, as it is not in the  
 New Catalogue of 1868. I am  
 now hoping to hear that the last problem is solved.

[illegible]

had been so "wildly" at home as  
"at sea".

of the same kind. I have written

of the same kind. I have written  
of the same kind. I have written  
of the same kind. I have written  
of the same kind. I have written

Dr. Hooker thus  
alludes to his recent  
loss: - "44 the most  
terrible of family afflictions,  
being the death of my  
wife, having most  
sadly overtake  
me - without warning  
and during a very  
few hours absence  
from my house -  
"Bibb."

P.S.

Dr. Hooker writes: - "I regret to say that  
we have no duplicate of *Bot. bonach*,  
Mildr. so I send you tracings of two extreme  
forms: it is rather a fat species, or rather  
a more form of *B. Senaria*."

I enclose the sketches Dr. Hooker  
was so kind as to make -

I also send you (please return) the  
~~first edition~~ <sup>first edition</sup> catalogue of Am. Ferns which  
I sent to Kew and which ~~was~~ Dr. Hooker  
and Mr. Baker have looked over, marking such  
species as they desire. They propose to help us to  
herbarium specimens of Ferns and other plants if  
we want them. Would you like to help make  
up this collection (at least by advice and hints)  
and share in the returns?

C. G. D.

1. The first part of the document is a list of names and dates, which appears to be a record of some kind. The names are written in a cursive script, and the dates are in a more formal, printed style. The list is organized into two columns, with names on the left and dates on the right.

2. The second part of the document is a series of short, handwritten notes or entries. These are written in a cursive script and are arranged in a list-like format. Some of the entries are preceded by numbers, suggesting a sequence or order.

3. The third part of the document is a single, longer handwritten entry. This entry is written in a cursive script and appears to be a more detailed note or description. It is preceded by a number, indicating its position in the sequence.

4. The fourth part of the document is a single, longer handwritten entry. This entry is written in a cursive script and appears to be a more detailed note or description. It is preceded by a number, indicating its position in the sequence.

5. The fifth part of the document is a single, longer handwritten entry. This entry is written in a cursive script and appears to be a more detailed note or description. It is preceded by a number, indicating its position in the sequence.

res. vol. 7, p. 17  
w. 181, 543.

Mr. S. J. Davis

[illegible]

of June 20th 1864  
I was, indeed, gratified to hear  
of your <sup>happy</sup> personal recovery  
to the Anti-Sl. cause of the  
distressing and severe illness. And I  
was, I am sure, not a little  
glad to hear that this matter of a

of the Society is  
without the collection of which  
the garden, and there is no chance  
of its being <sup>as</sup> I would have said.

I was <sup>at</sup> with Mr. Brown  
in the garden in Amsterdam. I saw  
the garden of a magnificent garden.  
Thank it was in the garden of the Society.  
in the garden, perhaps by giving it  
to give you the garden, of the garden  
garden, and then collecting garden,  
from garden and garden. Searching for  
one of the garden of the garden I  
say that there are certain plants which  
to garden or garden to garden to garden,  
and it would give me a garden to garden  
in such a garden. Now that are herbaceous  
to garden, if interest in it is to garden  
by the garden, and the work to garden as garden  
by the garden and garden, to garden grow.

I am <sup>at</sup> and it would not be  
possible for me to visit Tormer. This is a  
garden in the garden, garden garden  
and garden I am <sup>at</sup> garden, and I am  
at the garden of the garden in the garden.  
There are many in the garden which I  
to discuss with you. For me I say, I am  
to garden you by giving you a garden  
to garden the garden of the garden, and  
some 80 species, which I am <sup>at</sup> garden the  
garden.

I have I garden - garden of garden to  
garden - garden to garden with garden - garden of  
the garden as well as one of garden and  
garden garden garden, I have garden garden  
the garden garden, so closely have I applied  
myself to my hybridizing, - chiefly of Lilies, Corals,  
and garden. My Lilies, as my garden  
approaches garden, afford me much garden  
garden.

P.S.

Many of my Indian friends, Miss  
etc., etc. are coming here; and,  
should I like to see my friends, should I  
enjoy my family and my friends?  
Should I be thinking of the future? I think  
I ought to think of the future; but I think  
I think I think I think at home at the  
time.

Charist, Dec 11.

Sept. 18th, 1875.

My dear Mr. Garrison.

Relying upon your good will, I enclose and to you a list of the Annual Exhibition the articles which I have to send.

I have collected 10 cases,  
Harris Hall, 2 cases; a large  
one containing 1 pick each of 1  
variety of fossils in exhibition,  
and two small ones of 1 the 5  
to be sent by carting; and a small  
box of small Grapes, 4 small  
ones of small Grapes.

I am compelled to say this form of  
(over) ~~over~~ I find it impossible to  
reach Boston by Sunday or Monday.

I believe the place is  
your; and will bring of the  
your; and will bring of the

Sincerely,  
C. S. Pringle.

J. S. Thanks for Typha augustifolia. I shall  
soon be got home, however, before I spend the  
species in a rail-road ditch; near it grow  
the other species, and between or among them  
intermediate forms.

1  
Birmingham, 20 August

20th Aug 1875

My Dear Mr. Davenport

With kindest regards, I am

I went to my office, and stayed as I usually do.  
The next morning I set out from Birmingham  
for home, my arms full of plant-treasures, the  
first of your former cannot, my, being full of  
delightful memories of the work of the last  
few days, and my heart full of gratitude to  
you, who had it so good cost to himself, as  
I could not but feel, beyond my own  
pleasure.

Does the dinner I have maintained  
since my return, imply this last? It was not  
I did not do longer with you, for business  
required my presence at home, as I found.  
My own time then I have been interesting occupied.  
But on no day, as I suppose, have I been

... as it was in ... your very

Yours faithfully, C. G. Pringle.

Charlotte, Vermont.

Dec. 15th, 1857.

My dear friend,

Mr. L. C. Dumas Esq.,

has your excellent

sendings as well as your long and interesting  
letter, and have before them. Everything  
deeply appreciated. I had received  
a letter that my son had also received  
your little book. I am sure  
some things which I hope to copy, as  
in some. Did I write to you before  
about and C. Smith?

You can not imagine how happy I  
am sitting under all my care and interest.  
I have been of your meetings in full spirit  
for weeks before I am ready to leave home!  
I feel of course whenever I return for a day or  
two. Next Feb. you may have a letter  
from me. Yours as ever,  
C. L. Phipps.

October, 1861. I have been thinking of you  
 I have been thinking of you very much  
 and of the many things that have happened  
 since we last met. It is now the 10th of  
 the month and I am in the city, and  
 I am very glad to hear from you.  
 I am well, and hope you are the same.  
 I am, dear friend, your affectionate friend,  
 Wm. Lloyd Garrison.

I am glad you will share in your  
 a Christian's visit to the North. I  
 I am sure it will be a most successful  
 one, and I am sure you will  
 be for me.

*Miss Mary J. E. Prince.*

C. G. Pringle.

April, 20, 1879.

Your kind letter of Jan. 12th, which elicited for you fresh sympathy on account of your new arrival, has too long lain unanswer'd on my table, while I have been straining every nerve to discharge my duties toward my correspondents, and accomplish the large amount of her business-work that falls upon my hands. Since winter began, I have toiled almost incessantly for some fifteen hours a day, until I feel so tired. Spring has now at last come, and invites me out into the fields again, but I obey reluctantly, when I need two months more to put up the plants already on hand.

accept my thanks for a copy of your  
Hors. Cat., and my congratulations  
upon your success. I rejoice in all  
your achievements, and can deeply  
thankful that you can find in  
collecting so much relief from toil and  
grief. I reflect how much pleasure  
you are giving others also; and sincerely  
hope you may go on in the way of power  
and usefulness, and your path may yet  
be bright and free from trouble.

Last fall I began a correspondence  
with Chas. Jas. Spurgeon of your city and  
the collecting and studying of lichens  
under his care; and throughout the present  
season lichens are to be a special object  
of search with me. As opportunity offers  
I search over the old stone walls, fences,

etc., in this vicinity with great interest,  
and feel eager to go early to our N. E.  
excursions for alpine species. Mr.  
C. J. Spurgeon desired me to carry on together  
the study of all classes of plants, and not  
stop in hard down, so over the present again  
and again; but I greatly enjoy finding fresh  
interest in my old haunts, which had  
become familiar and tame.

You will let me talk a while  
myself and tell you how I purpose  
cruising again into Lower Canada this  
summer. I expect my friend Prof. E.  
Brainerd to accompany me. Though we  
will go through with an expedition  
up the St. Lawrence River of northern Maine  
and go down the coast toward Labrador  
as far as practicable, it is the Saguenay  
with its wonderful cliffs that most

Charlotte, Vt.

Jan., 28, 1880.

My Dear Mr. Sumner:-

Since the receipt of your  
New Year greeting I have been struggling  
through the distribution of my plants,  
and have just mailed you, having put  
up two *Aspidistra* fragrans and *Woodsia  
hypnoides*. (Of the last I put only two.)  
which you desired. As you do not con-  
sult ~~the~~ ~~the~~ take care of any specimens  
of *B. Arctostaphylos*, &c., I leave you  
both.

It is the same story with me this winter, -  
great promise of work. I have a good deal  
of work on my hands even now, that comes  
by way of my Census appointment; and I have  
hardly begun the amounting of my plants.

Hoping your health is better, and that all your  
work will go, I am, yours faithfully,  
C. L. Pringle.

all this country is wonderful to me;  
and despite the drawbacks to comfort and  
the hardships of my work, I enjoy myself  
greatly. In Arizona I have nothing to fear  
from Indians.

Please remember me to my kind  
friends the Paxons and Mr. Robinson;  
it is in my heart to write them, but  
in my race with this rick and swift  
throttling flame, I can hardly write a letter.  
Yours faithfully,  
C. C. Finkle.

Tucson, Arizona.

April 26, 1881.

My Dear Mr. Sampson:

I have not forgotten your  
kind interest in my journey nor my  
promise to <sup>send you</sup> specimens of the ferns, which  
I must write. These I send in a little  
packed by the same mail with this. I  
number them, and will thank you  
to give me their names; some of them  
I have determined to my satisfaction;  
the remainder I have not had time to  
study at all; and they are such as I  
have never seen before. You may label  
them all "Santa Catalina Mts., Arizona,  
April, 1881."

It is three weeks today since I reached  
Arizona, and this city; and the most of  
this time I have spent about the  
Sta. Catalina Mts. I found vegetation

as advanced on my arrival here April 5<sup>th</sup>, as it is with us by the middle of June, so you may believe I have been kept—exhausted—only trying to secure everything. And I have succeeded well, for I have already more than 100 species for my collection, — my sets, I mean, — not counting a large number of miscellaneous plants, phanerogams and cryptogams.

Shortly I propose starting for the Santa Rita Mts., and the San Juan Valley. Mr. & Mrs. Loomis are in this vicinity, — but we have not yet succeeded in meeting. These regions are a vast-field for botanical exploration; no one man can examine thoroughly more than a corner of one of these territories in a single season.

I am pretty well prepared for work having bought a two horse team and covered wagon and hired besides the assistant brought with me from

home a man acquainted with the country and with the Mexican dialect, to serve as driver, cook, etc. He keeps the camp, while my assistant and I range the mountains and gather in the plants, and he does the most of drying of the plants.

This season is an unusually dry one even for arid Arizona; for some time I found the ferns shrivelled almost past recognition. A few showers occurred last week, however, and then they unrolled; I am not collecting them largely yet, because I think I can get better specimens after the July showers begin, and the young fronds come to maturity.

I have rooms here in Tucson for storage, etc., and expect to make this my headquarters for some time to come. It is a strong mud-walled city of 10,000 inhabitants, American, Mexican, Indians, Chinese, Africans, Europeans, etc.

could cover much more ground, and  
he was all the while talking about my  
getting new species in advance of him, and  
mouthing over it, envious of my strength, my  
outfit, opportunities, etc. Some things I heard  
with him and he begged two specimens of  
a number of such things as he had not  
found. On return he gave me but a single  
specimen that was acceptable; he forced upon  
me some specimens of a common plant, half  
ripened fruit, which I threw away and  
have since replaced with a full complement  
of mature specimens. Many plants of my  
large collection of which I made 25 or  
more as fine specimens as possible, he also  
sometimes snatched scraps, sometimes good specimens,  
for - this year for the first time, whether earlier  
than I cannot always be told, for he does  
not date anything; never all these (perhaps  
even the specimens he drew from me) I  
am sure he is sending off to Mr. Watson,  
and others in order to get them named, if new.

Tucson, Arizona.

June 19<sup>th</sup>, 1881.

Dear Mr. Sanborn:

You say that you "have  
a characteristic letter from Lemmon".  
I will show to you other characteristics  
of him which his writing to you, as he  
does, reveals to me. I am a little ap-  
prised by his conduct; but before this  
I did not think of rehearsing to you my  
complaints, as I will now do.

Lemmon's ruling passion is a crazy  
desire to find new species and get them  
named after himself or his friends. Last  
year he came into the comparatively new  
field of the Sta. Catalina Mts. and  
found several new species, three of which  
were named after him. He wanted to

Keep the field to himself until he could  
fully explore it; and when he found  
me here this spring, he was very jealous  
of me. I was in the south canon of the  
mountain, where he wintered last year;  
so he and his wife soon went around  
to the north side. When they came in  
from there, we met in Tucson. They had  
R.R. passes, little else, — little money; I  
had a team and a good bank account.  
They tried to saddle themselves upon me,  
but I felt cautious; I wished to treat  
them well, however, and took them to  
the Sta. Catalina once or twice. We were  
together, when he got this woodbin for me.  
We were following up a cañon, at one time  
I was considerably in the lead; I came  
to a deep and shady gorge which con-  
tained a waterfall; in a cove of one of  
its damper walls I found a fern I had  
never seen growing (*Aspid. patens*;) I

was bending over it, when Lemon entered  
the dell; his manner on my announcement  
of Stimp's fern became excited, and he  
crowded hastily past me and began gleaming  
from the wall all the specimens of this woodbin  
he could find putting them up before me  
(as it was windy, I gave him a little assistance)  
and was allowing me to get a single frond;  
when he was done with this species, he struck  
his pick (he always carried a light pickaxe)  
into the row of *A. patens* from which I had  
just cut a single specimen (rooted), and  
began appropriating the roots for his trade,  
without asking me (until afterward) if I  
had all I wanted. I was pained not so  
much as the loss of a just share of the  
fern, as at the exhibition of selfishness in  
one whom I had thought despite some  
eccentricities a pleasant entertaining companion.  
All the rest turned out like this  
in the end. I was stronger than he, and

condition of vegetation is most wretched.  
I am assured that we may expect  
rains after a few weeks, which will revive  
everything. The past few days I have  
been about the south side of the Sta.  
Cautious only to find that they had  
joined with the heat a new terror. The  
clouds were broken like a furnace and  
many all their plants were withered; their  
growth only came feebly to the surface here  
and there, and the water was so bad  
as to make us sick. You can not conceive  
how dreadful such a state of things.

You ask if Mrs. Lemmon is really very  
small. She is about the average height of  
women. A very fit mate for Lemmon, whom  
she calls "Lemmonia", while he always ad-  
dresses her as "Annabell", which means, as he  
explained to my men, "worthy of being loved."

Yours faithfully,

C. C. Pringle.

Before I can myself send specimens.  
He magnanimously told me of one species,  
which he thought new, that I was en-  
titled to. The credit of its discovery, since  
we are also had found it. Since his  
return to Oakland, he has sent a letter  
to a Dallas paper mentioning a spread over  
his discoveries in this country in which he  
carefully avoids the slightest allusion to  
another colonist in this field, and men-  
tions certain things found by me and not  
any of him at all in a manner to lead  
me to think it was himself who saw them.

In short, though I was put on my  
guard by the letter of Mr. Wright which  
you kindly let me read, I was disappoint-  
ed in Lemmon and quite disgusted over  
his behavior. After the trip to which I  
have alluded, I decided it would not  
be convenient to carry him and his wife  
about further and on longer trips; and I

think they preferred to work at a distance from me. Don't infer that we had any trouble when together, for we separated on most friendly terms, and they had much to say in my praise. I have been told.

Now about the Woodbine; Lammie told me that he got it last year near Mt. Graham N.E. of here and what Eaton said about it. My talking to him much of your ability among ferns and telling him of your having named a n. sp. for Parish (with whom he is not on good terms and over whose news he was much excited,) was the occasion of his sending it to you; he made haste (I wonder if he did not send it before leaving here) to do so, because he feared I might do the same, and your esteem and friendship for me might wash it. W. Rimpier, Davenport. This fern you will have received from me also, on this;

for I found it in another canon which I explored alone the day following the one in which Lammie got it. Lammie declaring when I left camp at sunrise, that he could not climb the mountain that day.

Were it not for the structural likeness to *W. obtusa* or *argens*, which you authorities so much agree upon, I should, judging chiefly from its habits, think it quite a different species from either. It grows in wet-shady woods, very unlike the habitat of *W. obtusa* in Vermont; but then the climate here is so different from that of Vermont; even *Pellaea atropurpurea* here has to take to the margin of brooks for moisture enough to live on.

I would be glad to see you for the ferns you mention but would all ferns not growing in mountain brooks are so shrivelled up, almost beyond recognition that I don't want to trouble them. This is the third year of severe drought, and the

Portland, Oregon.

Nov., 30th, 1881.

Dear Mr. Tammont

Your postcard of Oct. 3rd  
to care of Mr. Grinn was forwarded in  
care by post Dr. Ferry. I have all along  
hoped the Arizona people in Arizona  
felt grateful that I was safely and far  
away from there; for I wish to  
my life to do much interesting work  
in the world.

When Dr. Ferry took me into  
this institution, he appointed me  
work for a month, that  
I have been able to sustain but little  
time for writing; and, though I have  
collected a good supply of material, the  
fact that I have been in any way, I  
have not of course found anything in

writes you in his last letter.  
I may mention that, while in N. Cal.,  
I got many specimens of *Aspidium* *Mt.*  
*rubra* and in this State I have made  
large collections of *Polypodium* *virginicum*,  
and many of other ferns.

I have been much there winter in  
Oregon and Washington, but hope to leave  
in a few days for San Francisco, and thence  
go directly home for a few weeks at least.  
Mr. Sargent will write you for help  
of names, after which I shall expect  
to finish the volume by collecting in some  
parts of Canada. Though it may be some  
time as they can be distributed, I find  
pleasure in buying up good numbers of  
plants at once. For California I got  
about 150 species, and my Oregon collection,  
largely of arborescent species, will fill a great  
box. 60 inches squared up, as I am.

Most the best of my pleasures now  
is the getting acquainted with the botanists

of the region, & their country. I may, but  
I say that I find them (write my  
name). That you know of them far,  
agreeable work. Last Sunday I was  
most pleasantly in the morning.  
Some of the people but most promising  
at least I have. As it could be you  
anything stronger to know. One of

Mr. C. F. Henderson, Portland, Oregon,  
Colli., Ex.; and, as I suppose his name is  
in the Bot. Director's, I will beg you to  
get it inserted as above in Mr. Coulter's

issue. Mr. A. is a teacher in this city,  
and a fine young gentleman; with thoroughly  
worth respect & success in the course of  
uninterrupted field of S.

Now I should like to see you and  
the Mr. Sargent; it is possible that I  
shall visit Boston, if I know the  
winter. Best wishes.

Yours faithfully,  
C. G. Pringle.

Charlotta, Vermont,

Dec., 21, 1881.

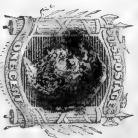

My Dear Friend:

Home from my last  
voluntarily journey to the Pa-  
cific Slope; only for a few weeks  
I was there. I think I would  
go again. I think I would  
go from Portland,  
Oregon. Sailed Nov. 29. Stopped  
the day in San Francisco, out-  
saw in vicinity and Dr. Kel-  
logg. Spent at Colton  
with Dr. Purry and the Parish  
Brothers. They are fine men.  
Some things still in flower there  
and the weather delightful.  
Stopped a day in Tucson; there  
was some frost on the low  
lands; on the hills forward is  
Eucalyptus in fl. from in these regions  
not withered up. Spent a day  
at the Dr. Patterson. Stopped at  
St. Louis and on way.

Faithfully, C. G. Pinckney.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE

Mr. Geo. E. Davenport,  
8 Hamilton Place,

Boston,

Mass.

Charlotte, Feb. 5, 1882.  
Dear Mr. Davenport

I am just enjoying a walk  
on a mountain side of  
the Bal. I did find that the  
cliffs of the Bal were steep  
were aspid something, var.  
Scop. something; some all  
the plants growing in rocky soil  
in the communities of the mountains.

The cyprinids of the Sacramento were *A. maculicoides*.

[illegible]

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. E. Davenport,  
8 Hamilton Place

Brooklyn,  
N.Y.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. E. Davenport,

641 - 15th Place,

Boston,

Mass.

by clothes so conspicuous and free  
from a burden so onerous.

You may remember my impetuosity  
to get into the Iroquois Mts. I need  
to think of Laramie as something there  
all through the season. But there are  
regions as promising in that South-  
western world.

I don't know when I shall again  
see you, for I have no errand to  
Boston.

May I trouble you again to think  
of Mr. Brewster a parent of Corvus?  
I really don't know whether it is  
sufficient to achieve in many  
"Brewster", and I don't want to risk  
losing these valuable specimens.

Hoping you will be able still  
to think kindly of me, perhaps to  
speak of me apologetically  
occasionally, I remain as ever,  
your faithful friend, C. G. Pringle.

Charlotte, Vermont.

Nov., 13, 1882.

My Dear Friend;

I am home again  
and sooner by a month or two  
than I expected, when I wrote  
you last from S. J. Thanks to  
Mr. Sargent's outrage and treatment.

Ever since I desisted last  
spring, to continue there or two  
years longer in his service and  
engage on the N. Pac. Survey, I  
have been unable to please him.  
All the season he has goaded me  
on to an early completion of the  
Museum work, demanding im-  
possibilities of me. He wished  
me to suspend in a great measure  
(or entirely so) my own collecting,  
but offered no better terms to com-

pursue me. Through I feel  
obligations to my friends,  
but equal to that to the Museum,  
for I had been made by the terms  
of my engagement with Mr. Sargent  
to look to them for half my  
wards, I did this to a great extent,  
and suspended the Museum work  
for my own but 33 days in the  
entire season. Yet I was always  
with and in the Museum, in comparison, and  
was, as I understand it, with dis-  
tinction; so that a good friend of  
yours and mine thought me I sup-  
planted. I would be justified in re-  
signing.

Only the desire to carry through  
to the end what I had undertaken,  
held me to the work. And, when  
I reached Tucson and found  
my expected funds withheld, it  
remained to maintain

my self-respect, that I should  
telegraph my resignation and start  
for home directly.

I recollect saying to Mr. Robinson  
a year ago (perhaps two years ago,) that  
I should endeavor to please Mr. S.;  
but that he should never make me  
his back. I never was so terribly  
angry with him as on a last occasion;  
but I can give figures to vindicate  
myself; and, happily, there are now  
a few in the West who are able to  
attest what my arrival has been. I  
never had the sympathy of those all the  
season.

So, My Dear Friends, this year we  
passed without my having done much  
for you or your favorite birds. But  
let us hope that the future will  
more than compensate for our losses  
of this season, when I shall travel  
at my own device with untrammelled

to be telegraphed and write to  
Dixon and San Francisco to get  
me 100 up in the work, and  
inquire on funds.

California volunteers have all  
the time sympathized with me,  
and now they are pleased to see  
that I have "worked up the  
very savings." Parry and I have  
been kinder and known of the  
nature of my relations  
with him; and the former employs  
in strong language to express  
his opinion of the transaction, I  
had to suffer.

Have read the enclosed and  
I don't know whether Miss  
Turbin is still at Livermore Falls. I  
am so glad to hear her plant from you,  
and that she can supply others.

Yours faithfully,

C. G. Pringle.

Charlotte, Vermont,

Nov., 23, 1882.

My dear Mr. Tappan:

I thank you for your generous expression of confidence in my integrity. My trouble with Mr. Sargent makes but a short and simple story, as you will see, when I can tell it to you completely. He wanted to accomplish his ends without regard to any interests guaranteed to me in our agreement, and when I tried to discharge in some measure my duty to my patron as well as that to him, he thought to bully me into submission. He withheld funds. Then I resigned by telegraph and started building. He was surprised, and saw he had made a mistake, and

Charlotte, Vermont.

Dec., 9, 1882.

Dear Mr. Sampson.

Thanks for the rare ferns.  
Ophi. bulbosum came to me  
from Dr. Garber. I believe that  
specimens of *B. matricariaefolium*  
can yet be found in N. H.  
safe enough to come pretty near  
*B. vernalis*.

None of the species in Latin's  
Check List I lack but 13;—

*Helleborus*

*Chrys. lanceolata*

*argentea*

*Pellaea aspera*

*punctulata*

*ternatifolia*

*flexuosa*

*Pharis serrulata*

*Adiantum tricholepis*

*Asplenium cicutarium*

*Polypodium californicum*

*Aspidium juglandifolium*

*Anemia hepatica*

but as I have bought *Thrombium*  
Texas + Mex. plants and exportations  
of 1882, some of these will soon come  
to me, I am confident.

Very faithfully, C. G. Thimble,

I am willing  
to buy of Sampson,  
if he has specimens  
of the following, and  
will accept of them  
at the same price  
as he paid for them.  
I have no more of them  
to sell.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Danforth,  
8 Hamilton Place,  
Boston,  
Mass.

Charlottesville, Va., 20, Jan., 1883.  
My dear friend: Your letter  
of Jan. 18th was 18th full of  
interest that interests me greatly  
even while I am in the midst  
of my distractions & sets of  
various exercises and many large  
collections, - with many almost  
to make more for his own  
name. But I am falling under  
the weight, then comes of mounting,  
etc. I want to get my notebook  
in a perfect order before I leave  
it again. Have patience with me,  
I would have half an hour that  
I shall get from you these Ar-  
izona forms and others. I would  
for to be sent whenever I please,  
whenever I can; and with the  
extensive patience I now enjoy,  
I feel my Christian duty  
may be realized. I have no  
idea where Mr. Sargent has in  
mind (I was nothing of it.) I  
in mind Dr. Purdy's mind to keep clear  
of everything unnecessary. Yours truly,  
C. L. Pringle.

POSTAL CARD

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. L. Thompson,  
8 Hamilton Place,  
Boston,  
Mass.

Tucson, Arizona.

24, May, 1883.

Dear Mr. Swainson.

That our earnest-  
wishes that some fern might bear  
together our two names, quite as its dis-  
coverer and yours as its author, has been  
realized, gives me deep joy. and I am  
grateful to you for the part you have  
borne in the matter. I knew of your  
belief that I should find an undescribed  
species, but I dared not hope that it  
might be done within the limits of  
the U. S.

Its habitat is, — Base of rock in  
the Sierra Tucson, a low range of dry  
mountains, five to ten miles west from

Succow, whose flora bears a greater  
resemblance to that of the deserts  
and desert-hills about the lower  
Colorado and in north-western Mexico,  
than to that of the Sierra Madre Mts.  
On these hills the fern is abundant. When I  
first came upon it, there were but few  
specimens that were not shrivelled up on  
drought. I got 12 to 20 poor little clumps.  
On the 16th inst. a rain fell over this  
region, a rare occurrence in May, and  
on the second day thereafter I went out  
to the hills to gather specimens for my  
distribution. I found the ferns unshrivelled  
and green in some places; and of great  
pain secured some 25 satisfactory specimens.  
This was before I had heard from you that  
it might be new, certainly was new to our  
territory, or I am sure I should have  
tried and elaborated widely to get  
more, though suffering thirst and exhaus-  
tion.

Two days ago, after receiving your letter of the 13th, I walked out again five miles over hills and mesas covered with sharp rocks, the thermometer indicating 100° in the shade, the rocks so heated as to burn my hand; but I found not a pond that was not withered up again. I only could get a quantity of roots which I propose to take home and plant in the hope of getting more specimens from them.

I believe I shall go home for a while. Rusty has arrived at Prescott and urges me to join him. I see objections. Business at home suffers; my assistant is ill and should be taken home. The success of Gen. Crook's expedition is doubtful, his very safety in doubt. I am warned to keep out of the Southeastern mountains; but they must be like the Sta. Catalinas, - vegetation dormant. Yours faithfully,  
C. E. Fingle.

Charlotte, Vermont.

17 June, 1883.

My Dear Friend:

Delightful exchange!  
Soft-and odorous air  
for biting <sup>dusty</sup> winds, and  
soft- green sward for  
hot-and flinty rocks,  
cool springs and brooks  
and rain to feed them  
for dry "sand washes."

A month or two in hybrid  
ising. Then I am bound to  
return. Dr. Parry says Lem-  
mon may go to E. in Aug.  
and may not, as he is going.  
My last was Ch. Eaton, was  
it not? an true, please.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Sampson—  
8, Hamilton Place,  
Boston, Mass.

Charlotte, Vermont.

17, June, 1853.

My Dear Mr. Davenport.

Your letter of the 10<sup>th</sup> was duly received as well as your supplement and check list, for which I am really grateful; and last evening came the fern plate, kindly and thoughtfully mounted in your own way, which I shall cherish as a precious keepsake.

My advertisements in our botanical journals are of little avail; a very few small orders for selections may have been obtained in this way; but I have never sold a set, I think, thereby. I did not suppose but you got many orders, however.

I am interested and pleased to hear  
of the new fungus ~~of~~ <sup>from</sup> Chetlauth Pringlei.

You must have more specimens of the  
fern, and I send them; Cater I hope  
to have more for you, and better ex-  
panded specimens.

I am anxious about your health  
and about your very life. Can't you  
come to Vermont for a change and  
rest? Is it not possible for you to  
gratify my wish, for ten years cherished,  
that I might have you here to show  
you the homes of our rarer ferns?

I am too tired today to write much,  
for I am toiling on the farm, trying  
to repair some of the neglect incident-  
upon my absence during the two ~~last~~ <sup>past</sup>  
seasons.

Yours faithfully,  
Cyrus G. Pringle.

Charlottesville, Va., 15 Aug., 1893  
Dear Mr. Sumner,

Dr. Parry was sick with a malarial fever, and had to give up the Colo. trip. Then I turned again towards Arizona, but I was disappointed and have had to give up my work again at least for this year. Could not find a good assistant. The hoped for favorable prices of copper ore in Arizona did not come; and when in view of these facts I thought of giving up (a course almost recommended by the depressed state of my pecunies,) the fears and distress of my mother were such that I had to stop talking about going. I have thought of visiting Boston and Maine (Mr. Ketchum), but am too much discouraged and too doubtful for even that. I would have started for Ketchum this week had I secured good company. Can't get up enthusiasm enough to undertake alone the worst trip. If we thought we could find Egyptian monuments there would you make us willing to go with us? At any expense?

Yours faithfully,  
C. G. Pringle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Sampson,

8, Hamilton Place,

Boston, Mass.

Charlotte, N.C.  
12, July, 1883.

Dear Mr. Farnport, I have waited and  
looked in vain for your coming; and fear  
you may be ill.

I have accepted Dr. Parry's invitation  
to join him during August and September on  
a botanical journey through the southern and  
western part of Colorado, New Mexico, I don't give  
up Arizona. Dr. Parry writes that Lemmon will hardly  
be there much more, I doubt if he goes to Arizona at  
all.

Yours truly, C. G. Pringle.

Wm. W. W. W.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Charlotte, Vermont.

22, August 1883.

Dear Mr. Swenson:

I am delighted to hear that you are to have a vacation. I really think a visit to Vermont will afford you more advantage than one to Mt. Kearsarge. You will see in their homes and gather far more of your favorite. A trip either would be far less exhausting - therefore safer for you. Then it has so long been your wish to come this way, a visit to Vermont comes first in order.

Trust me to plan work for you meanwhile. You will take the morning train Monday, I think.

for Charlotte in South &  
reach our station about 5  
P.M. and (I won't see me,  
come to East Charlotte with  
our mail-wagon.

Now may I beg you to do me  
a favor: on my travels I see so  
many strange scenes and curious  
objects, so many interesting plants  
and trees whose pictures I see,  
that I have been thinking of  
buying a portable camera, and I  
can't give up the idea. Last  
week I enquired into the Blair  
Toury Co., was assured from the office  
(47 Tremont St.) that it was, in  
the thing. In "Science" for June 1,  
Moses King, Publisher, assures of the  
trustworthiness of the firm. So I have  
decided to send you \$25 and  
beg you to visit the Blair Toury Co.

Co. before coming; and, if you  
are satisfied that they have  
a portable double Camera  
which I can use successfully,  
I buy one and bring it with you.

I would not think of "developing"  
the plates but to put them into the  
hands of a photographer.

I would like to take photographs  
the size of a dozen stereoscopic views  
and suppose a "carrying" 5x8 inch  
plates preferable.

Perhaps you will be pleased to  
receive and the Blair people be  
pleased to give some instructions, it  
enable me to work the machine,  
when you want I get away over mount  
ains.

If you don't approve, don't feel  
bound to purchase anything. Of course  
I don't care for "elaborate nickel mounting"  
and "best matting," but I want  
a best camera, and if you can not

money enough will stand more  
expenses. They have now made  
some improvements since last  
winter; or this "clair Combration  
Camera" may be better than the  
2nd graph.

"Rust" took work, I think, in  
Camden, N. Y.

It is too late for the Lib by  
I took in making this request  
but I hope you can do something  
which will add to the pleasure  
I am anticipating for us.

Best regards,

Yours truly,

C. L. Bingle.

Dear  
Come to give me all your vacation,  
if I can succeed in entertaining you.

1  
Charlotte, N.C.

30, Sept., 1883.

Dear Mr. Tammont:

I am glad to hear from you by your welcome letter of the 27th, that you have had so good success in photography.

I have put-up to send to the express office at the first opportunity the tripod (Glad the other will pack better,) and enclose herewith the \$6. you need to cover expenses of exchange, etc.

Don't send back the camera, etc., until you have taken all the views you would like to have; for I am doing nothing else than <sup>water-</sup>color sketches nowadays. Jimmy and I have been out every day since you left - (excepting two rainy days) and

have secured about 100 bushels of  
grapes already.

Perish is to be married Oct., 3rd  
in Newark, N. J. You may expect  
to receive a call from him on the  
8th or 9th. I trust my good friend  
is getting one of the best of wives.

I am deeply grateful to you  
for bearing in mind my unhappy  
situation. I had a selfish interest  
in your proposed visit to Mr. Piper, being  
in hopes my two dear friends would  
hold a council over my case, and  
thereafter shed on me a ray of hope.

But I do want to undertake another  
botanical journey. Do you notice that  
the yellow fever adds another terror to  
the west coast of Sonora, where I have  
wanted to begin my season in Feb.?

Yours sincerely,  
C. G. Pringle.

Charlotte, Vt.

26. Oct., 1883.

Dear Mr. Davenport

I send back Loomis's letter, which I have read with interest. It seems he did again visit the Anacleuca Mts. and his "Concealing Cañon"; and that he proposes to explore some "unknown mountain range" next year. It may be that he takes a clue from our new chieftain, and wants to go among the desert Mts. ~~to the~~ southwest from Tucson, as I do.

I have two copious letters from Rusby, now in Franklin, N. J. Under the circumstances his success was good, 400 species for his set, and many more will collect us more in the West, but intends to travel "in other lands" in search of medicinal plants.

Your success in photography  
leads me to hope that I can  
succeed.

Davy wishes to leave early  
next month, after which I  
shall be confined at home by  
chorea; but, if the camera comes  
before in time, I shall endeavor  
to go again to Smuggler's Notch to  
photograph its peculiar scenery.

Have you noticed the article a "Vacation  
in Vermont" in the last number of  
Harper with illustrations of Mt. Mans-  
field and Smuggler's Notch?

Yours faithfully,  
C. E. King.

This single lens, to replace the one  
now here, I want one of first-class  
efficiency, — no more; for I must not  
waste money of fancy accessories.

Would this nice box you have pro-  
vided hold a '76 camera and lenses,  
etc., or would it be best — to get a  
canon case, or, perhaps as better for  
packing in a trunk with heavy articles,  
a larger box?

If you will please enquire what would  
be the expense of say, —

'76 camera + (Case?) + say 4 "ding" or  
"New Style" holders,

Pair of Stereoscopic lenses +  
Monium or Jarlot lens

I will consider the matter of a purchase.

You are right, one of these holders  
does not shut close into the camera,  
(never has, I believe,) but springs out.  
I have tried to hold it close.

(Rusby has sent me 12 very good and interesting  
views.)

Charlottesville, 31, Dec. 1883.

My Dear Mr. Larnport:

I still adhere to my wish  
to have you enjoy photography  
after you have got so you are capa-  
ble of doing so.

When abroad certainly and  
whenever at home intensely  
busy with distributions and her-  
barium work scarcely less, it will  
be impracticable for me to develop  
my plates and print. You would  
find some pleasure in doing so,  
will probably have the time, and  
are handy to chemical and other  
supplies. Then, if there is any sale  
for views, you can effect it, to an  
extent sufficient to pay for materi-  
als at least. Let us hope, so that  
after the first outlay, the business

will not be an expense to us.  
The plates can come here with  
my plants from time to time, and  
be sent right on to you.

I think my funds will admit  
of my getting a new outfit with all  
advantages, and turning over to you  
this camera and lens and one  
or two holders. I would not ask you  
to pay me anything for these. If some  
time you are able to do so as well as  
not, and I need money, you may  
pay what you think just. But  
I have no idea of the market value  
of the assistance you are rendering  
me (you have been paying out money  
for ought I know) or of the work  
I am asking from you by my pro-  
position. I should think you might  
convince your conscience that you  
will be paying for these things in  
work.

I open Sewell's catalogues.  
Has the Blair Co. perfected a  
better camera than Sewell's  
No 203, or '76 Camera?

I do want a swing back, and  
a front-board for taking stereoscopic  
views; and, then, a kinged ground-  
glass plate is preferable.

Will you kindly enquire and ad-  
vise about lenses. Will there not  
be less chance for failure with an  
instantaneous drop? Would not a  
metal drop be less likely to dis-  
color than a wood drop? Would  
instantaneous plates be more expensive?  
For stereoscopic work would "Imitation  
Dallmeyer" matched lenses at \$17. be  
as good as any or good enough?  
Or would they be better? <sup>See also, Sewell's, "Dallmeyer" lenses at \$25 in sets?</sup>  
Are the Morrison group lenses, (B. & W.,  
C = \$50; CC = \$70,) much superior, and  
how, to the Dardot lenses? These seem  
to have wood drops. Of course for

Further (how I must pester you in this matter.) Will a '76 camera set upright? I must have such an one.

I am glad to hear by your note of the 28th that the last plates are 'pretty well exposed. I had so little faith in "lightning" exposures, that I probably erred on the other hand.

I am not surprised at the intelligence of the death of your mother; with you I rejoice that you could so dutifully and tenderly care for her in her last years of infirmity.

My daughter ~~was~~ spent many weeks within 20 miles of here, without writing me, and amid such surrounding (under such oversight, I believe I may say,) that I could not think of visiting her. I heard that she and her mother were going to Boston; and a hope arose that through some good friend I might

put a letter into her hand; but I was surprised that an avenue of communication with her should so soon be opened to you. I beg of you not to let it be lost or closed by reason of suspicions around in her mother. How I wish you might meet my daughter and disabuse her mind of the false notions concerning me, which have been assiduously implanted in it. At least - (as it seems to me,) you can through your sister convey into her own hand a letter from me.

Now I am glad that I told you so freely and fully my feelings toward my poor daughter. I have now little hope of enjoying her society, while her mother lives. It may be best that we should not meet; I want her to know that I have cherished a father's love and that there are good people, who love me, as they understand me.

Yours truly, C. G. Pringle.

Charlotte, Vermont.

My dear Sir,

Dear Mr. [Name],

I am writing to you at the  
moment of my departure for  
Europe. I am very anxious  
that I should be able to  
do so, and I am very anxious  
that I should be able to  
do so. I am very anxious  
that I should be able to  
do so.

You "submit" the inevitable  
King. But what work so worthy  
can I really do? Can I must go,  
is it not the way of my duty?

After I get some money, I shall  
want to be getting a fresh supply

of dry plates. I have some 25-  
30 in. Kew.

You must tell me what I  
ought to pay you for exposure and  
labor in this time during the past

year. I will be a great deal regretful  
if they are plants with some unique  
views, and when we get my 25 or  
30 fine photographs of the  
flora and plants in my garden  
to get a list and perhaps  
pay expenses of printing etc. I  
don't expect to make anything out  
of this, but now I have my camera  
I wish to secure some photographs  
to please myself and friends, if  
no more. Mr. C. F. Johnson writes  
that it would greatly help him, if  
I could photograph public flowers like  
size or more, with a better lens  
might not I do this? Well, I  
don't see but he and Prof. Engelm.  
may be a good price of Pinus virginiana

and some of the others on Kew and such.

When you heard of the fair, one of my friends  
Mr. C. F. Johnson of N. Y. I think some money  
by the stock. I have been depending upon  
a number of years in a good way, but I  
refuse. I have no more from my collection  
and I never will. I have spent my special  
pounds for a very long time.

I ought to have kind Mr. Johnson a  
good deal of it, but he has been of a very  
kind to me, and a very kind, making his  
donations to me.

My dear Mr. Johnson, I have been to get on my way  
and I have been to get on my way, and I have  
been to get on my way, and I have been to get on my way.

Charlotte, Vermont

11, Feb., 1884.

Dear Mr. Davenport,

I hasten to remit the balance, \$10.38 you wrote.

Friday I spent several hours most pleasantly making myself familiar with the new photo. outfit. Thanks to your careful directions I had no trouble in doing so. I am charmed with the outfit; I should think I might do all I wish with it.

I hope you will receive back your first love, and find much more happiness with it. I fancy I shall not often use the pair of lenses. With this Carl Zeiss & Co. you make capital pictures. I only hope I can approximate to your excellence. Your ingenuity will easily prevent the leakage of light on the right-end. I have thought strips of black velvet

pasted in the right place would do it.  
While waiting for a chance to send  
it to the Ex. Office I may take a  
few views, and send to you in  
the small holders, to be developed.  
If so please print two or three  
pictures and send here to my name.

I am now waiting for Faby to  
come back from Canada and take  
charge of affairs.

I now think (as I hear that veg-  
etation in S. Arizona owing to a  
mild winter is more advanced  
than I supposed, and as Dr. Gray  
hopes later to secure for me passes to  
help me cross the Mex. R.R.) I shall  
go right to Tucson and travel first  
through the warm low desert country to  
the S.W. Yours gratefully and faithfully,  
C. G. Pringle.

and the two I would upon please  
one each to F. A. = Fred. A. H. = Fred.

I must say I don't feel so con-  
fident of my ability to manage suc-  
cessfully the new camera as I would  
like to be. So many diaphragms may  
prove a snare to me.

Hoping you and Laura are  
now recovered from your misfortunes,  
and wishing you and yours every  
blessing, I bid you another goodbye,  
and remain faithfully,  
C. G. Pringle.

Charlotte, Vermont.

21, Feb., 1884.

Dear Mr. Javenport,

I have sent to the  
express office your camera and  
tripod in two parcels.

Don't give yourself any anxiety  
about payment. I don't want you  
to pay in cash. I would have  
kept the Jarlot W. A. lens, whose  
use I had learned, had I not  
been desirous that you should enjoy  
so fruitful a source of pleasure.  
I hope you can again do this as  
fully as you did last fall; and  
I trust you will not find it an  
expensive pastime.

I have lately had misgivings  
but I was asking you too much  
you in depending on you to develop

my plates. If so, set-it-down to my ignorance & the expense of this in time and money, and depend yourself from my impositions.

I have tried developing two plates, but am quite at a loss to know if I have been successful. It do this seems easy enough; yet as I come into the 'art' - I am ~~interested~~ (in view of the abundant work already reported of me,) from undertaking to learn all its niceties and to acquire skill and judgment in its operations.

With Tucson as my base for a while or less - I shall hope to get a photographer to develop a few of my first-plates and give me rules for timing. Also I have a hope that I can send to you in a package of from two or three plates. I would like to go first for Chidambaram Pringle, and at the same time secure for you a view of its habitation.

You may be surprised to learn I am not away so this. I was ~~not~~ ready to start on the 11th, when my good assistant, whom I had had in training all winter, with contrivances to all expedition chose matrimony rather than travel. So I have had to find and get ready another.

Now I hope to be off on the 28th. I expect to stop with Dr. Ferry a day or two. Possibly he may impress my course, but I now think I shall go right to Tucson. I want to make a journey through the southwest-region while Dr. - - - - - from me there N. H.

I think you will hear from me next - at San Francisco.

My daughter is still in Vermont - but under surveillance.

In the holders you will find 4 plates to be developed too precious for my experiment. If you can get some pictures from Tucson

Charlton, Vt.

26. Feb., 1894.

My Dear Friend, your post-card  
of 23 is received. My sympathy  
and is with you, and earnest  
hope that your family may all  
come through this affliction  
safely.

A} great joy! I spent the  
day yesterday with my daughter,  
not seen since 12 years! She is  
a dear and lovely girl. She  
was so with her mother  
to reinforce Dr. Cullis, Faith  
Doctor, Boston Highlands. I  
have given her your address and  
hope you can meet ~~and~~ that  
she may obtain a <sup>knowledge</sup> fuller ~~of~~  
of her father through your kind-  
ness. I expect to be on my way  
tomorrow. I dread a little the  
springing off. Hope I may return.  
Yours faithfully,  
Pringle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Sampson  
of Hamilton Place,  
Boston, Mass.

Swampport, Iowa,  
2, March, 1884.

Dear Mr. Thompson,

I was extremely surprised to find here last evening your kind letter of Feb. 28. I was very glad to be assured that our children are out of danger from the fever.

As I did transfer the plates to the light box I did not see the red lines. I am now in a light box. I feel sure that the plates will come out as I am bringing with me with me. I have one idea about creating a photograph in Tucson: Thanks. Am not surprised to hear that my developed plates are "good", too careless.

I am passing a day or two most pleasantly in the warm sun and shade of good J. Parry. About to start on tomorrow evening for #1 Tucson, where I am glad to know I may expect some to hear from me again.

Yours faithfully,  
C. G. Tringle.

Tucson, Arizona, (mexico)  
16, March, 1884.

Dear Mr. Savenport,

Your second letter to me  
in care of Dr. Perry was received  
just as I was leaving Savenport.  
I think the likeness of my friends  
(the two interior views) perfect,  
and shall be delighted if you  
can make some fine pictures  
from my exposures, as the two  
ladies are invalids, scarcely  
leaving home, and I intended  
to give them a pleasure.

The hints sent here by post-card  
I am trying to profit by. I have  
next my room here a dark  
closet, and, as I manage, have  
no idea that light can injure  
my plates.

I have made two or three exposures, and shall try to get the plates exposed to form in a package of pressed forms? in the box.

The photographer here says it would take an entire day, and a fresh and full stock of chemicals for him to prepare himself to advise me. The trouble and expense deter me from employing him. So I try this little piece of bungling. Oh, if you can only see the scenes which I saw on the ground glass!

I reached here on the 7th, jumping out of February in Vermont into June in Arizona. Thermometer often 80° and all the country green and flowing. Abundant rains, still continuing, are making this such a season for verdure as Arizona has not seen for years. I have already begun collecting.

I have bought a span of horses and a large spring wagon with a white canvas cover in which we can keep cool and dry and travel in ease. My hopes of success are high.

Am getting ready to travel southwest, where reputation is more advanced, and hope to get into Mexico. If I could only get so far as the Gulf of Cal!.

Will not expose many plates till I hear from these on my return here.

A beautiful and loving letter from my daughter, who has visited my home, thrills me with strange emotions, with potencies, really, have its reward?

Peace reigns among all the Apaches.

Faithfully,

C. C. Fingle.

\* Some lichens for ballast which are very common plants near the Higginson.

(with photographs) of March 5th, 1884, and I have a letter of March 24th. <sup>I have</sup> the prospect of Arizona views. Sorry I over-exposed; but I can be quick enough. From a kind letter from Mr. Higginson I understood that he got some idea of Arizona mountains from my photographs. Another Pimple is in the low mountains called Sierra Tucson five miles west of town; the San Catalina Mts. are a dozen miles north-east from Tucson. Sorry I over-exposed, because I exposed 8 plates on my Mexican trip, with the P. M. and arrange to send them by mail, if possible. Was misled by Spaulding's "Serenade".

I sometimes feel troubled in conscience when I consider how much trouble I am making you in this. More soon again.

Yours faithfully,

C. G. Pimple.

Tucson, Arizona.

17, April, 1884.

My dear friend,

I am back again from my first journey into Sonora; 'it was' a long trip, occupying nearly four weeks, during which time I travelled nearly 800 miles. Not a single unpleasant occurrence to mar the pleasure of the trip;—only this; that is a very dry country (Western Sonora) and in the regions near the Gulf of California watering places were 15 or 20 miles apart and grass so scarce that I had to hurry past some good colonizing places, particularly upon the desert plains. I reached the coast at a point some 90 miles south-west from Altar; and there

nothing was growing amongst the rocks ~~and~~ <sup>small</sup> hills upon which my horses could feed, so I had to crowd them (too fast-growing, weak) instead after a brief day's stay. This you may be sure was a grief to me. Oh, it is a fearful country to travel; yet missing men there, who hospitably entertained me as I passed them, assured me that so verdant a spring as the present had never been known to them since their stay there.

Well I brought home a big trunk full of choice plants, some of which I am confident will be found undescribed. Ferns? No; on these snow-bound mountains of W. Sonora I saw only two ferns, *Noth. Stockeri* and *Sinclairi*. I will not say that no others grow there; a thorough search might reveal others.

But on my way back I spent three or four days among the Baoguinai Mts., just on this side the Boundary, and there were many ferns, including a *Pellaea* which may be *P. flexuosa*, (I do not know that species,) though I ~~will~~ <sup>will</sup> tell you nothing flexuous about it, ~~and~~ <sup>and</sup> a *Notholaena* with fronds too narrow to send to me for *N. dubitata*. I will send bits this time. — With the plates.

I want to return next month on long trips along the Boundary and onward, ~~and~~ will probably start the first of next month.

Just now I am on the point of driving over to the Sta. Catalina Mts., where I hope to find Will. Parish, who has come to botanize Arizona this summer. You will see dear Dr. Parry in a few weeks, or he soon goes east, thence in June to Europe.

This morning I got your letter

Post-script.

The postmaster tells me he will take the plates, if put up so they cannot break; so I send the 8 taken on my Mexican trip and one just-taken (Santa Catalina Mts. from Tucson) as before, in accordance with your advice.

Now I hope you can make good negations from these Mexican plates! Especially Nos. 3 and 4. Yet - they were timed by the same faulty rule as before.

The officials at the Custom House on the Mexican border were so courteous and kind, permitting me to enter Mexico free that I atones myself of photographing the Custom House (Aduana) as a slight return. They were greatly pleased. Their homes and friends are, I suppose in some far-off Mexican city (the capital I think,) and views to send to their friends would be most highly prized. If you can make

even to the pictures, please mail 6  
to Senor Don Enrique Ochoa,  
"Admura," Sarabi,  
Sonora, Mexico.

---

So at the San Felix Mine I experienced  
so much kindness at the hands of the res-  
ident proprietor, a gentleman from Chicago,  
that I tried for a view of the house. (He  
told me his friends had asked him for some  
a pencil sketch of the house he lives in.)  
If you can make anything of the photo  
(No. 4,) please send 6 to

X Wm. S. Sturges, Esq., Tucson, Arizona.

---

I hope for some of these, because some  
were exposed under a cloudy sky or towards  
evening. One, No. 5, was with drop-shutter  
on account of wind swaying the trees.

Well, I trust these will reach you  
safely. And now I can go ahead for  
views more intelligently.

Pingla.

from Baboquivieri Mts, was not  
scarce. So tell me if it is new, or any-  
thing but - *P. flexuosa*.

Then I found what I take to be  
Noth. *Astilboideum*, a *Chilanthum*  
which though looked like *Ch.*  
*lanuginosa*, and another which  
I hope is your *Ch. villon*; if not  
it must be *Ch. myriophyllum*, trunc.  
as it has clustered rootstocks. Turn  
specimens of this and one each of the  
two former you will find in one of  
the boxes of plants.

Now I will go on photographing with  
better confidence, exposing for good  
views and giving one or two seconds  
longer time.

I do want to go back to the Santa  
Ritas (main mountains) but it is al-  
most June, and I ought to be north.

Address still Tucson (to be forwarded  
if you please). Yours faithfully, C. G. Pringle.

Tucson, Arizona.

24, May, 1884.

Dear Mr. Sampson,

Coming in from a two  
weeks trip to the Santa Ritas, I  
found last evening your letter of  
the 9th with props, and your card  
of the 9th.

I am greatly pleased and  
encouraged that you succeeded in  
getting so good pictures from my  
Mexican plates. I am delighted  
with that of the Sasabi Custom House  
and shall not fear to visit there  
again. The white covered wagon  
is mine; you will see it - ~~it~~ <sup>it</sup> ~~had~~  
come out on my plates now  
and again. It is my home on  
wheels.

I do want to travel again

in Sonora after the summer rains,  
but it is doubtful if I do this year.  
And as the San Felipe House is  
more than 200 miles from here,  
it is not likely I can try again.  
So I will beg you to make a few  
prints for Mr. Sturges; they will  
at least be better than the pencil  
sketch his friends asked him for.

What species is the giant cactus?  
you ask. That is a question that  
disturbs my mind much; and  
tremblingly I hope it may be a  
n. sp. I have asked Dr. Parry to  
look it up. He will be calling  
on you about these days, I trust,  
and asking to be shown this  
picture.

But what trouble I must  
be making you. Now I have  
20 plates, which are underlined,  
I fear. But I send them all

off to you in three boxes as before.  
I will beg you to make two or three  
prints of the two called "Sullivan  
family" and "Sullivan House", if you  
can get tolerable ones and mail to  
Mrs. Wm. S. Sullivan, Tucson, Arizona,  
and 6 to 12 prints of the Mirasol  
in the Santa Ritas and send to  
J. V. Weigle, Tucson; Mr. W. was kind  
to us and gave us soap, when our pro-  
visions were about out.

About these mines in the foothills  
of the Santa Ritas I found myself  
in a midst—a rich flora, so I did  
not get to the main mountains for  
which I started.

I found the Noth. mine abundant  
but collected but little as it was  
mostly dry and I was under the  
impression it was going under N.  
decalatan, which I did not care to  
put into my acts. The Pelletier sent

"on the common botanizing ground  
of Arizona," as he wrote at first.

I am really sorry for him; and  
have been not a little embarrassed  
as I say.

Should Dr. Parry call on you  
after you get this, I would be glad  
to have him read it.

Well, I must go north soon.  
But there is the fall flora, which  
I have for three years longed to work  
upon. And it has been Mr. Hep-  
burn's plan to return to Cal. by Sept.  
Then, if I go north, there is com-  
mon and wife! Well. —

Yours faithfully,  
C. G. Bingle.

Tucson,

24, May, 1884.

Dear Mr. Davenport,

From the letter which  
I just posted I left out these  
memoranda slips.

I will speak of Will. Parish  
at this opportunity. He made a  
mistake, as he now sees, of going into  
partnership with an ornithologist.  
Mr. Hepburn is a man I much  
admire; but his business keeps him  
uncamped in a few places (chiefly  
in railways) through the entire season.  
Mr. Parish, having invested his funds  
with him, must stay with him to get  
his living; they are not able to buy  
a team, or even a mule, with up to  
which the Government can scour over  
the country; and Mr. Parish is dis-

in climb, I really think in capacities for, certainly missed 15 trading long marches, as he lies in camp, as he says, and looks longingly toward the mountains so near and yet so far away. He is thoroughly discouraged, not to say demoralized, as a collector. To make his case worse he is held on ground which Lemmon and I have worked quite thoroughly. The relations between him and me have been pleasant; I have twice taken him to good fields, but he would scarcely take anything on the last trip; had given up making a distribution next winter. It pains and embarrasses me to find myself in his way. Since my sets of 1881 were exhausted I have had so many orders for them that I decided to make 20 sets to renew them as far as possible. This I began last year and had worked here more than

a month this spring before I knew of  
 his coming here. It was Gene courteous  
 for me to have kept for another field  
 as soon as I found him here, but my  
 former much impeded journey back from  
 me a clue to many good things (some  
 n. sp. which I had never succeeded  
 in getting into my city) which I have  
 long been anxious to follow up. And  
 I have staid and done this with  
 good success, at the same time finding  
 other new or rare species and collecting  
 again my species of 1881 and 1882.

I was practically within my superior outfit-  
 tings of Gene here had enough planned  
 and large potatoes to have headed  
 him off, while entertaining the kindness &  
 feelings toward him, and really trying  
 to put him in the way of good things.  
 I must think he knew of my being  
 here, before he left home, and came  
 on with a purpose of competing with  
 me (in a friendly enough way to the end)

FLORA OF THE PACIFIC SLOPE.

~~Gilia inconspicua, Dough.~~

Baboquivera Mountains. in Arizona

10000 feet, but close by the Mexican border.  
and some 50 miles south west  
from Tucson. April 9.

C. G. PRINGLE.

Domestic is having much  
business, which will bring out rapidly  
the autumnal flora, with which I am  
little acquainted I follow my own  
inclinations and Dr. Gray's wishes,  
and decide not to change over  
this season. So let me  
again and take a field new to me.

I have my new genus, — Pringlea  
phylla, Gray, — aeanthaceous  
near to N. Seneca, modest and neat.

I have the most friendly letters  
from Will Smith. He is badly broken  
down that he has lost the season, and  
his brother's marriage practically  
turns him homeless. They are kind to him  
but he thinks best to leave them to their hap-  
piness. Am glad my daughter (alas how  
little mine!) is visiting you. Please bear in  
mind that she is not yet more than half  
disinherited from the influence of her father  
was, under which she has been reared.  
I am anxious about your health.

Yours truly, C. L. Pringle

Tucson, Arizona.

18 July, 1884.

Dear Mr. Tarnpart,

Back from a three  
weeks trip among the Huachuca  
and other mountains, I find it  
a pleasure your favor of June 28th  
with proofs by which I see  
that we have secured a few more  
good photos; the two of my dear  
Santa Rita Mts. I shall especially  
cherish. I am annoyed about  
the light-bruaks and lately  
have been trying carefully to  
avoid them. The excessive dry-  
ness of this climate has caused  
certain shrinking or warping  
in some of my holders.

I have now used up more  
than half of my plates, and

I put the camera into Dr. Smith's hands

and am exposing for plants,  
and thus making the landscape  
incidental as a background,  
unless I find some view or  
other object of special interest.  
Should I want more plates  
toward the end of the season, they  
might come to me in some tin  
cases returned, might they not?

On the Huachuca I got  
a good lot of *Asplenium monanthum*,  
and found a few plants of  
*Asplenium jaylandii*, showing  
a dozen fronds of 1883. *Pellaea*  
*marginata* I saw here and there  
coming up after its summer rest  
and looking much like *P.*  
*gracilis*. The plants of last year  
were dead.

Into the box in which I  
sent more plates I put a  
specimen of an *Asplenium*

(I got 20 specimens) to ask you if it  
is *A. Glehnii*. I at first took it for  
*A. parvum*. Also a small frond,  
broken up, of an *Asplenium* - which I  
strongly suspect, as well as *Asplenium*  
*mar.*; though, when gathering it, I was  
hoping I had got *A. Karwinskianum*.  
I have over 40 good fronds of it.

I saw some dried up plants of *For-*  
*sythia tricholopis*.

I travelled widely over the moun-  
tains, exploring some cañons similar  
to Smuggler's North, and have con-  
cluded that some of Lemmon's finds  
were scarce there, and that he ex-  
posed the plants as far as he could.  
Do you think he got many specimens  
of some of them. I have sent home  
for his account, that I may know  
whether I found his "Fern Album"  
cañon. I want to return a month  
or so later and secure complete ones.

Tucson,

7, August, 1884.

Dear Friend,

I start again this morning toward Sonora, Mr. Stephens, the ornithologist—accompanying, intending if we prosper and find grass and water (that country is now very dry) to be gone three weeks.

The letter promised by your last card does not come before I start.

Yours faithfully,

C. G. Fringh.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Sarnupbach  
8, Hamilton Place,  
Boston, Mass.

Tucson, Arizona.

24, Sept., 1884.

Dear Mr. Farnport,

I am glad to infer from your letter of the 18th, that your health is better. And it is pleasing to hear of so good success with the last plates. The most of the large cactuses about San Felix are the strange one and not *C. giganteus*. Mr. Stephens with one of his plates secured near San Felix a tolerably good view of a magnificent specimen of the strange cactus. But I have a plate from which I hope you will get a better one. I have some 20 plates, which have been exposed, and would send them to you, only, as I am going right home, I think best to carry them in my bag.

I intend to go home as soon as I can dispose of my team and put away. My collections are packed ready for shipment.

When I wrote you last I was starting for the Atchafalaya Mts., planning to round up my season beautifully with a few more weeks of work. Finding 'good collecting,' I travelled slowly, and before we reached the mountains my man and I had both contracted malarial fever. He took to the bed and lost it, while I struggled to drive the disease and shake it off, and get back to Tucson. It was a terrible journey of three days in weakness and suffering, but three hours in sixty miles and much of the road not travelled once a week. I barely held out to Arizona. My next fever was dangerously high, 105°.

a good physician soon subdued the fever; but my strength is gone. I could not do much climbing in some time; and I don't want to rely any more on my half-invalid assistant. Fred is wanting my help at home; so I have decided to return, though I know not to have yet 400 species for my new set, and to leave certain ferns and grasses especially.

Recently I have received a kind and sustaining letter from Mr. Henshaw, which I have not acknowledged, because I have permitted the cares of this abundant autumn to come upon me to insulate me—

Look to hear from me in Charlotte next—

Yours faithfully,  
C. G. Pringle.

Charlotte, Vermont.

11, Oct., 1884.

My dear Friend,

I take pleasure in sending you by mail, (Reg. Pk.) my anroid. I shall have no use for it this fall, I think. Open with thumb nail.

I also send with it my Ruby. It is by you to have it - my expense a new glass inserted. This was broken early in the season by the carelessness of my man, and I had to use a candle concealed in a box with P.O. paper. I look more doubtful about my visiting Boston, as I shall have had to go to Cambridge, and shall need to have my dollar for another journey; it may be to Mexico and away.

Yours faithfully,  
C. G. Fernald.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE

Mr. Geo. C. Champant,  
8 Hamilton Place,  
Boston, Mass.

Charlotte, Vermont.

My dear Friend, 12, Dec., 1884.

I was surprised and delighted to receive  
a beautiful album of photos. You have shown  
excellent taste in arranging the views, and have the  
names all right. I have looked for your promised  
letter without success. I shall write soon to send  
Stapans - 24, 25, 26, 27, 28, 29, 16 + 19 and for my assist-  
ant 1, 2, 6, 7, 8, 14, 21, 25, 27, 33, 35-36, 133.

My daughter has come like a good, lively girl to spend  
the winter with us. I am engaged upon an herbaceous  
excursion. So far all goes well for another journey. My  
Wife will stay in the North. Mrs. [unclear] with party [unclear].  
I shall stop the City at [unclear] in my corner.

## MEMORANDUM.

To

Charlotte, Vermont, N. S. A., 27, Jan.,

1882

Dear Mr. Sampson,

It is a treat to hear from you and  
send you plants for Christmas. I am  
sorry, I am not able to give you  
more before today. If you have not  
sent me Missis's list, please send it  
to me. I am sending the list to you  
and hope you will be able to send  
me some more so I will be able to  
get them back from Missis. But if  
you send all to me by express it will  
be for you.

How I wish you might go out to see  
Miss Piper some Sunday. I believe she would

to please her. Can't you?  
Yours truly, C. A. Pringle

Charlotte, Vt.

31, Jan., 1885.

Dear Mr. Sampson,

Well, I am glad to know  
that the Chilean tree-ferret  
is saved. I hope it may be  
C. scariosa, a name most  
appropriate. It is at home  
only on limestone ledges, in  
driest situations where there  
is "least soil soft and rigid,"  
as you note. (I had it some such  
specimens to revive them, and  
make them swell their fronds)  
and in shaded places with more  
earth or richer mould, "colder  
and more lax." But it is all  
one species; and I trust you will  
have the courage to do as Watson  
or Gray would do in another order.  
I will for the nice prints on my  
friends. Yes, I must write Harry's.  
Yours faithfully,  
C. G. Pringle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Geo. C. Chamberlain

## MEMORANDUM.

Charlotte, Vermont, U. S. A.,

6, Feb.,

1885

Dear Mr. Davenport,

Hurrying preparations for my journey, I think of a fresh supply of "dry plates", and send you \$15., begging you to order such as you think best (Carbutt's Special?) sent me by express. If these are more rapid than A + R's, will 2 seconds suffice where I used 4? And can we "stop" at all in drop shutter exposures?

Do tell me frankly; for I don't know. Ought not I to send you a sum of money to balance for what you have done for me. Or have you hopes of realising a little from the sale of pictures? And ought I to send my plates this year to some photographer?

Sometimes I feel that I may be  
abusing your goodness cruelly in asking  
so much help from you. Unless you  
hope it may yet be to your advantage,  
do tell me, if I should not employ  
a photographer. You have shown  
your usual kindness and patience in  
helping me to a start; but you must  
not permit me to burden you too  
long.

The Anroid is; do tell me the  
cost of repairs to it, that I may repay  
you. It was fortunate for me that you  
sent for it; for I might not otherwise  
have known it was out of order till  
on my journey.

Prof. Sargent may call on you to  
take some of our photos, since he has be-  
come interested in them.

Yours faithfully,  
C. G. Pringle.

At this season the plains and  
valleys are in better vegetation,  
for it is the dry season. When  
I was yet in the season  
particularly if it rains, I find it  
a fine affair to follow.

Now the myriophyllites common  
here in limestone rocks similar to those  
of S. arizona, where I found it last year.  
Neth. *sinnata*, *ferruginea*, *alabamensis*, *grayi*,  
*christi*, *linheimi*, *formosa*, I have  
seen. I have found so far from  
St. Louis. If I go down to St. Louis  
soon, I must send you a parcel.

I fear I shall not like travel by  
on wheels back; but it is a wonderful  
region I am to explore, and see  
little ~~things~~ <sup>things</sup> as yet. It must be that  
I shall get many choice things.

So you have heard from Jones.  
From Dr. Beck of Austin write me

that only two of the 18 subscribers  
he had procured for him in Tampa  
held (so miserably, distressed were  
his pecuniary affairs) I thought perhaps I  
had just as well say. May I venture  
to send that he is this year working  
in Arizona (Humboldt?).

Miss Landon and Miss Hall  
intend to visit the East upon the case  
of the N. O. Exhibition, you will  
doubtless see them.

I have secured passage N. O. and  
the first day of my journey will  
be on March 20th, say say after my  
arrival here.

Accept my kindest wishes, and  
hope that I shall be able to do  
my duty here and return safely  
home. Yours faithfully,  
A. D. Briggs

just being everywhere in Mexico,  
one of the cities (visited by me  
in March) the people are  
it is being a great number of  
about a mile or two in the heart  
of the country upon its backing out  
there. I know it was common in  
the city of Cuicatlan, but when  
my friend died, I began to fear, I  
might linger there too long and  
accordingly packed up my things  
and went away. I hope with my collection  
from the country. I have  
been to the next day by spring  
to my friends.

Rest, good fare, etc., will soon  
restore my strength. Health, Mexico  
is getting very dry. The rain expected  
soon will bring up a new and  
fine flora and will probably check  
the vegetation. Now I hope to go

El Paso, Texas,

14, June, 1857.

Dear Mr. Javanport,

I have been awfully  
remiss in writing you for a long  
time in ignorance of my movements  
and in doubt concerning my safety.

It is because since the first month  
of my Mexican journey, <sup>I have been</sup> too unsettled  
to speak of my plans, and have  
postponed writing from week to week,  
in order that I might solve my perplex-  
ities. This I have now done for the  
present at least, and now can  
definitely report concerning myself.

I am on my way home, I sus-  
pect you will not grieve over this  
fact, as I do. I am in some measure

[illegible]

When I left with me I was pursuing a long journey by mule train through the Sierra Nevada. Just that time I was surprised by an attack of malaria fever, a return of the disease contracted in Arizona last fall. This made it impossible for me to go and watch the progress of the disease, which I worked near the time of the outbreak, causing not only a delay in the work of medical aid, if I should put myself under it, but also the fever by my condition would have been. The attack

more with time, my daily suffering  
in society and finding out my  
strength and a safe way out  
of it. They were all so kind  
to me I could not have been so  
kind to myself as they were. I was  
so weak when I came to the  
mountain, I had no strength to  
do anything but to stay at home.  
I was so weak I could not go  
to day myself to the train and  
leave. In a day or two I would  
be again through work. I anticipated  
being compelled to give up my work,  
and attempted to accomplish as  
much as possible before I should  
get too weak. By the time my  
strength got reduced to such a point  
at mid day, a dear friend if him  
died of tuberculosis in Birmingham.  
He was a very missionary man  
for me. I had known of one

The report of my time and progress  
 upon the study of the history  
 of the world, and especially of the  
 history of the United States,

back for a few months - with  
me as the best I ought to be  
when so situated. I hope to  
soon be much better. I am better and  
stronger. I am better. I am better.  
I am better. I am better. I am better.

My Summer season is not  
the best time for your country  
I have no doubt they can be  
most to be seen without  
any of the birds. I have  
seen a few species, however, for my next  
wintering and have found the  
most of the species to be, and I  
sent you fragments of it. - I should  
like to see all four of the species  
in your collection, such as I have  
seen, but I am in that time  
to see the time, and now I have  
to go. That in my hurried fashion

up they went into my big box,  
which must be several weeks on  
the way home.

I feel gratification over the  
size of this collection now. -  
750 species in fifteen boxes, and  
many odd species of a few specimens  
each, - in all 900 or 1000 spec-  
imens. I never expected so much in  
a region. Such vast areas that yield  
at this season little or nothing. It  
cost as much hard riding and after  
long stanzas to gather a specimen  
a day. It will be more fruitful than  
either the rains now; then will be the  
time for grasses, and a large collection  
of Mexican grasses is a great object with  
me. As yet I have only half a dozen  
species for my sets. Leguminosae (Acacia,  
etc.) predominate in my collection.

Reading this do you despair, and  
fear I will cling to my infatuation  
for botanical collection. Long  
Lipsters? Well, what else am I good  
for? What else can I take the  
place of this in my mind and  
heart? It would be a great thing  
to explore Mexico, as I am in the  
way to do, and I might manage to  
succeed, till I could do it properly.

But I cannot over-ride  
my mother's heart and cause my  
dear friends grief by such sacrifice  
of myself. Still I should wish  
to go on my way home.

It may be two or three weeks  
before I reach home, as I wish to  
visit friends on my way.

Longing to see you, I am,

Yours faithfully,

C. L. Pringle - con

20 July, 1888.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

W.C.  
Geo. E. Thompson,  
8 Hamilton Place,  
Boston,  
Mass.

Charlotte, Vermont.

27. July, 1855.

My dear Mr. Sargent,

Now having finished my  
course of medicine, which I hope  
to have lessened me of malaria,  
I am on the point of returning to  
my work in Mexico. I feel re-  
freshed by my rest (it will be a  
vacation of six weeks of the time I can  
get back,) and think I can make  
another trip in comparative safety. My  
field is not a malarial country; I  
am somewhat acquainted with its  
real perils so as the better to keep  
clear of them; my old room and  
some good friends there are awaiting  
me; good rains have now revived the

P.S.

My boxes not having come home  
I am unable to send you  
any specimens of ferns, but you will  
receive them, I trust in two or three  
weeks, as Mr. Horsfield undertakes  
to attend to this matter.

There is a *Notholaena*, which  
you thought might be *N. nira* from  
the leaf is very like; but with entire  
leaves in your hands you will see  
that it is a species as near *N. Hookeri*  
as it is near that species.

Then there is a very white fern  
with lanceolate fronds, I enclose to me,  
And a *Gymnocarpium*.

vegetation; and I hope to find the  
full flora more abundant than the  
Spring, &c.

I can't be satisfied to give up six  
only half a loaf, and leave with good  
reason to secure before winter a collection  
that will meet the expectations  
of my numerous patrons.

As I go back for plants, I have thought  
best ~~not~~ to take my camera; as I must  
go on foot or on mule back chiefly, it  
is a heavy encumbrance in addition  
to my botanical burdens.

In *Nikunawa* last spring I  
made a few exposures of places, which  
I beg you to receive by express, and  
with them you will find some of this  
vicinity. Please send a print each  
to me <sup>at New York</sup> ~~at New York~~.  
Will you not write me once in a  
while to *Nikunawa*?

Yours faithfully, C. G. Pringle.

also a fine specimen of a  
beautiful bird, which I saw with brown  
sides, fine colored, I saw it. I then  
found it in many spots, and only a few  
plants -

You will find to keep the money paid  
for the support.

By the end of this month, probably,  
the summer season will cease, and  
the winter will begin. The weather  
will be cold, and I will not be so  
able to collect. But frost will  
begin to come for Christmas. It will  
tell me how long it will stay, and  
I will not be discouraged.  
Whenever I am home, I will  
be faithful.

S. D. Smith -

Chihuahua, Mexico.  
9, Sept, 1885

Dear Mr. Brewster,

I write you after a month's  
work here, during which time we have  
seen some very fine specimens. The  
weather is fine. No more rain yet. It is  
a pleasure to be out and to  
collect. The weather is not so hot as this  
time of year, and collect the birds  
from the day birds of summer to the  
birds of a Mexican August temperature.  
In this respect, the weather is not so hot,  
the change was very good for me -  
Almost daily showers, which obscuring  
but for a brief while the bright sky  
is now again, and I will keep the

is unlike what I distributed  
last year (St. Catalina May, 1888)  
that I might put it into Oct-?

You were right in your con-  
jecture that Fred sent off by mis-  
take all my stock of *Chilomenes*  
*mesopoda*; I am glad you can  
return the bundle -

All right to send to Cambridge  
and New; but both have my full  
Set.

During the last few days of my  
stay in Chimalam I exposed some  
to plates, to get strange Mex. views,  
chiefly; and I can shortly dispatch  
to you the plates.

When I get my tickets printed, I  
shall want to send those which belong  
with these specimens.

Yours faithfully,

Pingle -

Charlotte, Wisconsin -

23, Nov., 1888.

Dear Mr. Davenport,

Arrived home on  
Saturday evening in excellent  
health. I am looking back  
upon a most delightful and  
most successful journey, re-  
membering with a thrill of glad-  
ness the bright skies and the  
interesting flora of Mexico, and  
am looking forward with true  
anticipations to a season in my  
herbarium and to pleasant  
converse with my friends, of  
which you are one of the dearest.

\* I have not <sup>before</sup> seen the sun since I came

In haste to get names of my plants for the printer, I have sent you today by mail the terms of this last journey.

If I mistake not 406 is one of your "orders" of last winter. I found only one station and that yielded but 13 specimens. I sometimes regretted (almost) that I found that station, so many miles I travelled the steep rocky hills of Chihuahua searching their cliffs in vain for more. The clump was growing from black mould which had accumulated in a fissure of a cliff about a foot wide and was sheltered from direct access of rain and sunshine by a projection of rock near upper part of the fissure. I never found another place just-like it, but

am confident that there is a plenty of the same hidden amongst the score of miles of cliffs, which render 'difficult' of access the summit of the mountains within view from the City of Guadalupe. These Smugglers' Notches can be reached twenty times over, and yet that is only the plateau region of Mexico. A journey of 150 miles to the west, which must be made on mule-back for half of the way, brings one amongst the Sierra Madre.

What was VI which Mr. Styrud sent you?

455, woodsin. Is it w. Mexican? I did not get enough for sets.

Last year I must have sent you a specimen of a woodsin from Santa Rita Mts.; was it - w. Mex.?

453 and 454. Is either of these

near Cincinnati, was related to  
me, saying I had met with elsewhere,  
confining us to the robust-  
in.

*Leucopoda*, with several *Stipes*  
and only moderately *Stipes*  
is common about *Stipes* limestone

beds of the *Stipes* *Stipes* Mts., and  
in the hills mentioned. I thought  
you had made a great mistake that time,

and studied the two plants carefully  
whenever I met with them. I soon came  
to give up that the little one was a

distinct species. Still I believed it a  
real variety, till near a end of the little

one, and growing strong and pale out in  
the full sunlight I at last came  
upon a single plant, of which I sent  
you a frond. ~~At~~ <sup>By</sup> this caused me  
to think that I might be mistaken; and  
when I reached home, and ~~found that~~ <sup>by</sup> *Stipes*  
*Leucopoda* ~~is~~ described as *Stipes* *Stipes* I  
found ~~it~~ <sup>it</sup> entirely so. Don't let the peculiar  
appearance of the *Stipes* *Stipes* *Stipes* *Stipes*

Charlotte, Vermont.

4, Dec., 1885.

My dear Friend,

Thanks for your earlier  
report on my ferns.

You did not mention 441  
of which I enclose a frond,  
but I presume it is one of the  
things waiting for Eaton's judgment.

444. *Asplenium*. *Asplenium*  
plant is worth anything among its  
characters this departs from *Asplenium*.  
*Trichomanes* in one direction you  
may not have noticed in the  
dried specimens. Its growth is not  
erect like that species, but the  
fronds form a mat closely appressed  
to the soil. During the autumn months

after the seeds of *A. chinensis* have  
fully formed under the favorable  
conditions of the rainy season, and  
as their sori are maturing, their  
rachis elongates under the pressure of  
the soil, roots at the tip and sends  
up new lower joints the they send  
of the apex. The *scissura* extremity  
of the rachis, for a while a connection  
between the young plant and old,  
usually decays early the next year.  
It was for this reason that I long  
desired to collect the *scissura* specimens  
of the plant, and that few  
of my specimens, gathered in October,  
show more than the rudiments of the  
plantlet.

But why is not this plant as  
far removed from *A. Trichomanes*,  
as *A. parvulum* is from *A. chinensis*?  
Notice the oblong pinnae, more

distinctly auriculate and acutely  
dentate - I sori compound - its  
maturity. Yet, if Prof. Brown  
yourself judge it to be only a variety  
of *Asplenium Trichomanes*, I leave  
it enough with him. I leave  
enough in your judgment to decide  
fully.

456. *Adiantum Trichomanes* (?)

Yes, you shall have the specimens  
you ask for I devote my sincere  
wishes to such as you and Prof.  
Brown and Mr. Faxon, etc. The plants  
seen by me <sup>very</sup> closely caespitose like  
many grasses, - the rootstocks branch-  
ing below and easily separable.

459. I was surprised, when you called  
this *Charitopteris leucopoda*; for it had  
not occurred to me this delicate  
little viscid plantlet, first found only  
in cold shade of cliffs of the rock.

negatives of these views I leave by you  
to make 6-12 of each for them

Yours faithfully

C. G. Pringle.

cause, as to water in road, your  
judgment. 459 is only water in  
state of 442 (of which the whole stock  
as yet is) which strangely restricts  
itself to cold shaded mossy  
rocks of a certain range of  
hills.

I do hope you will receive  
some many fine photographs from my  
plates. Without any experience with  
such things upon Cramer's plates to  
guide me, I risked little in that di-  
rection; but depended upon the accu-  
racy without rubber band to fix  
it down quicker, than it would natu-  
rally fall. A number of exposures were  
made to please my Robinson friends, from  
whom I had so many rides on their  
narrow-gage railroad up to the mines  
of the Santa Catalina Mts. and other  
valuable assistance. If you get good

Charlotte, Vermont.

8, Dec., 1880.

My dear friend,

Your hopefulness about  
the plants makes me light-  
hearted.

And then I am confident  
you will see justice done in  
the little *Asplenium*.

As for the white *Hotholena*,  
I was down near St. Albans,  
and as with me when it grows  
on the Santa Catalina Hills,  
where *H. vivca* was abundant,  
in many situations, some not  
very unlike that in which this  
grew (the face and verge of dry cal-  
careous rocks and cliffs, I have  
seen it always unvarying in char-  
acter, with the tendency of *H. vivca*  
when close by it, to approach it in  
appearance, would never have  
thought of putting it under that sp.  
I would be  
glad to see you name it *H. p.*  
as *H. vivca* was no friend of it.

we have good views  
of "Baptist" "Mission for Mrs  
Charlotte, Vermont,  
U. S. A.

My dear friend, 23, Dec 1885.

And now thanks for your in-  
teresting letter about photographs. An  
unmistakable answer to the  
out your position proof could hardly  
have believed that I failed twice  
to draw the slide!

Glad you find a good picture  
of Mrs. Johnson's dining  
cars. I want to please the good  
body who put us so well; so I beg  
you to send me 6 or 8 extra  
copies of the pictures.

So the views are giving you  
 glimpses of Mass. life? I am  
in a lousy fellow and very  
convinced to cold; so be gone about  
us city is capped in his great blankets  
(serapes) unless the weather is hot.  
Notice that the outer side of the long  
blanket is always thrown over  
the right shoulder. And the  
"strange projections" are water-spouts  
to carry the rain of the earthen or  
concrete roof. But you will find  
lots of donkeys! Truly C. G. Pringle.

Boston, Mass.

CE-74

Dear Sir,  
6, Jan, 1861.

On the 1st of Jan. I  
received your letter of the  
1st inst. in relation to the  
proposed amendment to the  
constitution of the State, and  
in reply to inform you that  
the same has been passed, and  
will be in force on the 1st of  
Feb. next. I am, Sir,  
very respectfully,  
Yours,  
J. H. Smith.

I am glad to hear that the  
amendment has been passed, and  
that it will be in force on the  
1st of Feb. next. I am,  
Sir, very respectfully,  
Yours,  
J. H. Smith.

Marlboro, Vermont.  
22, Jan., 1886.

My dear friend,

By mail I send you a parcel of forms, such as you were indicated a desire to have from me. Will send tickets, when they come from the printer.

I am interested in your efforts to get the two or three strange forms on the right footing; in fact (and believe) you will prevail.

Dr. Gray prefers that I go now far beyond the ground I occupied last season except to explore the Sierra Madre of Chihuahua. There I hope to meet with the great fossils by Leconte in the Arica shales.

Do you think it possible for me to get a new form and to issue? I don't see it.

I am eager to see the Mexicans and you have been making forms up for 5. Do you think some of them would be able to pay for materials? But what you say, I will do?

Dr. G.

Yours faithfully,

C. G. PRINGLE.

Charlotte, Vermont

23, Jan., 1876.

Dear Mr. Tavenport,

The views have  
come and have given me much  
pleasure. Some are beautiful.  
I think it is the morning exposure  
which you found underlined. For  
that hour I might use to advantage.  
I am thinking, a shutter with an  
opening twice the length of this one.  
I think I can make such an one  
out of pasteboard or cigar-box  
stuff. The opening in this one I am  
going to enlarge as advised by you.

I see that the larger part of  
these views are of personal rather  
than general interest, and therefore

not salable. It is no small  
thing - please the people - your  
name is among the names to the museum.  
I am glad to see  
the result of the exposures made  
on their account come out good.  
On the enclosed slip, I indicate the  
numbers of copies of a few water  
views, which I beg you to make  
for them, also those of which I would  
like a copy for my assistant.

There are 7 negatives which I hope  
you will pick up, - 8", 20, 34, 32, 23,  
the number of one in which appears (a  
white thread of a snake or snake?),  
and that one of boy (the Robinson  
hair, I think) which shows a Mexican by  
the name lighting his cigarette.

I have 4 doz. Keystone and 12 A & B.  
plates left, with want a few more in  
good time.

I received last evening a note  
from Mrs. Piper saying that she  
was not able to leave the house  
the past summer, and was in  
the woods and fields. Says she was  
not even heard from. Can't you  
any now spend a day with her? I  
am sure she will not long have her  
with us. I think I would like  
to visit her. To see her, and you,  
and Dr. J., and the family; but  
it would take a week from my  
collecting and make money  
which I need to buy.

Yours faithfully,  
C. G. Pringle.

PRINGLE & HORSFORD,  
CHOICE NOVELTIES,  
NORTH AMERICAN  
PLANTS AND SEEDS.

Charlotte, Vermont,  
U. S. A.

My dear Friend 11, Feb., 1886.

I am certain that the  
fronds of 448 Pellaea are  
"annual", getting their growth,  
putting, and dying down, all  
within a few months. I can't  
just say that they "die down  
during winter", that country  
is so different from ours; but it  
amounts to that; for fronds  
brought up by fall rains  
may survive a frostless  
winter and fruit early, but  
such will surely die soon after.

The fronds of the old fashioned  
*P. cordata* are biennial and  
fruit the spring after making  
their growth like all Pellaea  
of similar firm texture.  
441 grows 6 to 8 inches high  
Yours faithful Pringle.

Mr. Geo. E. Garvinport,  
8, Hamilton Place,  
Boston, Mass.

Charlotte, Vermont  
12, Nov., 1886.

My dear friend,

Thanks for the reading of  
this letter.

Mr. Baker probably means "1383":  
1383, which is (as I have it from  
Palmer,) the same as my 441.

~~Ferry & Palmer (or is it Palmer's)~~  
1391. I know nothing about.

How strange anyone should  
omit the two Fellows

If you have not sent Mr. Baker  
complete plants, we will have them  
in my Oct 15 to 20 to Kew in a few  
weeks through Dr. Gray.

Yes, I saw your clipping  
to Dr. Gray, did not know you wrote

will in verse!

C. J. C. C.

Charlotte, Vermont.

15<sup>th</sup> May, 1886.

My Dear friend,

I have to answer your card to Mr. Forbnd who is away on his wedding journey.

It was I who sent—the box of plates. I did not have time to accompany them with a letter, and have not found an opportunity to write till this morning.

I have been at home three weeks. I brought back, as you must have found, a few exposed plates. Before sending them I wanted to add to them a few exposed at my cousin Clark's (long promised) and this took me two weeks. So you got no letter from me.

You can appreciate my desire to make  
no noise about my being at home. I had  
to write to Cambridge and to Washington.

You were anxious about me, because we  
did not hear from me. Then you must  
have written to Dickinson, though I  
looked in vain for a letter from you  
from the time of my arrival there.

This is why I returned so soon;—

I found the hotlands of Mexico rainless  
since last October, and almost no vegetation  
starting. Last year there were good showers  
during winter and spring; and here and  
there I could find enough to repay my toil,  
not so this year. Then on the tenth day I  
was attacked with fever more severe than  
ever before. So I deemed it prudent to  
come home to recuperate and wait for  
the midsummer rains.

I am nearly well again. Yesterday I  
walked twenty miles without fatigue.

As I am planning to return very soon. Perhaps I shall stop for a month in Colorado. Probably I shall go on two weeks to the Mts. of Arizona to gather dry plants - to the Huachuclas, I think, the time to find "Concepcion Canon."

Next it is my desire, strengthened of late by Dr. May, to visit the Sacramento Mts., of S. New Mexico. Then of August 1st to be in Chihuahua preparing to travel in Sierra Madre, where some rain is sure to fall on the drier of years.

Before I go back you will kindly show me the results of these last plates.

If either of the views of Rev. Mr. Sutton's garden, etc., comes out good I shall want a dozen photos of it; and if either of those of Rev. Mr. Sutton's grave makes a good negative, I will be six. The latter was a dear friend of mine, and the former proves a kind one.

Of last year's photos Mr. Galt wants  
6 more of his family group before  
his "Tienda Parata", 2 of the Silver  
mill and 2 of the Ore train.

Not since 1880 have I seen May in  
Vermont. What verdure everywhere,  
and how soft and fragrant the air!

Can will need to tell me over again  
about the ferns seen to Mr. Parker.

Now I am eager to hear from you.

Yours faithfully,

C. G. Pringle.

I have bought Dr. Palmer's *Chimaphila*  
plants. Is this form rightly named *Nottholcassia*  
*Asciaborniana*? The only other species strange  
to me is *Pellaea Senousiana*, which is similar  
to *P. aspera* except that it is anther.

Charlotte, Vermont.

7. June, 1886.

My dear friend,

Your letter of the 3rd is before me, and the photographs came to hand Saturday evening. I am pained and troubled to learn that your health is miserable. Are you not planning a rest? I wish you could come to Vermont for a few weeks; and I have been thinking you might bring a lot of plates and go about photographing Vermont houses, etc., and thus make money enough to pay the expenses of your trip, <sup>quite</sup> ~~and~~ as much, (I should think,) as though you staid at home. I think the life would repair your strength; and I believe

you might do quite a little business, if you could offer photos for about \$2.50 per 12.

If I were to be at home I should urge this course. Yes, I am bound to make a good collection yet this season, and hope to start out soon. I find I can walk 20 miles a day without much fatigue, am quite over my fear, and soon rain will bring up vegetation in the S.W. Don't be anxious about my fear; I can manage that; would not have come home for that alone; the drought was excessive, and having passed back the temptation to improve the time here was too much to resist. I want somebody to kill off Geronimo and his bad Apaches so I can go again to the Quachness for a lot of Lily bulbs, etc.

I divide with you my stock of *Noth.*  
*Pringlei*, *Savonport*.—grateful to see our  
names again so closely coupled, though  
I can hardly understand how it is not  
*Palmeri*, since that gentleman first brought  
home the plant. Of course, however, that  
is not an inspirational reason. I don't  
know as I can give any further informa-  
tion than the specimens afford, except  
concerning its habitat. I found it among  
the Santa Lucía Mts. a dozen miles east  
of the city of Chihuahua, growing from  
bluing lime rock about cliffs and and in  
the banks of gulches. These last especially  
often presented the appearance of heaps of  
refuse from lime kilns. ~~And~~ In such meagre  
soil the fern has a foothold, and during  
the greater part of the year is as dry and  
white as the soil in which it stands.

I am glad to see the few new Chihuahua  
views come out so well; and my cousins

Clark are immensely pleased with the pictures of their home and pet-horses.

Will you please print and send to

Geo. A. Clark, E. Charlotte, Vt. the following?—

View of house which shows back door  
from the best-plate (I think  
there are two plates) . . . — 10

View of house from highway in which  
the horse stands erect and still . . . 10

View of man with horse, from the  
plate showing the more distant view . . . 12

[The closer view seems not well focused]

View of mother and children  
with their horse . . . — 12

Also (to come in same pkg) one copy each of  
two views of my Chittenden home and  
one of the goats for my good assistant—

and please drop post-card to Mr. Clark  
when you send pkg. I send \$5. to pay—

Yours faithfully, C. G. Pringle.

H

Charlotte, Vermont-

13, July, 1886

Dear Mr. Savenport-

In two days I shall, I expect, be off again for Mexico. No need to say much on this subject; you know my long-cherished purpose to explore the Sierra Madre of North Mexico, and how I have as yet fallen short of my promise - The Apaches are this year on the further side from Chihuahua, some 300 miles away. The Mexican Indians are good - I trust to find friendly Americans here and there, where I travel.

By express I send you a box of exposed plates. Please send results (say one print each) to F. H. Stanford, Charlotte,

and, if my friends are pleased, they will order numbers. I am apprehensive that you do not charge them enough in the ten cents at which you began. My mother has never consented to sit for a likeness, and I was so anxious to secure one when she proposed to stand by the horses, that I made five exposures.

Fred wanted me to photograph some animals, but I could not get near enough with my lens to make large pictures. There must be lenses for such things in life size.

I had to pay 150 per cent duties on the plates I took last spring. So I thought of the paper invention which might in my valise escape the notice of custom house officials. Have you tried it yet?

May I not hope to hear from you in Chihuahua? Yours faithfully,

C. G. Pringle.

H

1

Charlotte, Vermont.  
8, August, 1886.

Dear Mr. Savenport,

I have now been at home a few days. Within a few days after my arrival in Chimalama I felt compelled to return to bring home a sick assistant, who sickened on the bad water and other unfavorable conditions of that terrible country, and could not, I believed, safely remain there, nor be safely sent home by himself.

I was not aware of the serious aspect of the border troubles until I was north of the Rio Grande. Now, being on the safe side of that river, I am trying to restrain my impatience to get back to

my work, until I can hear of the international troubles being settled.

But I feel dreadfully undone by this last tedious journey. I feel out-of-place even at home, and believe I shall be most disconcerted, if compelled to remain here through the season. Vegetation was starting tolerably well though later than last year. It has been my purpose to return, even if, owing to the depleted state of my funds, I have to go alone.

I have not wished to inform my correspondents of my return; but this letter is due you by reason of the friendship that exists between us and the gratitude I feel towards you for the comfort afforded me during these melancholy days by your Form Notes in Torrey Bulletin just-at-hand.

Cousin Fred hands me your much-prized present of a framed copy of Worcester's Synopsis

and eight of my photographs. I am  
glad to see that some of them come out  
satisfactorily. Miss Geo. W. Pindle and  
his wife are delighted. It is good likeness  
of Mrs. Bates as he shows; and Miss  
Jennie, his wife declares the likeness of  
George in the same picture the best he  
has ever had taken. He will write you for  
copies.

I presume you sent only a part of  
the proofs, in I trust all the remainder  
were not spoiled.

I may be <sup>starting</sup> back to Mexico before the  
end of this week. Don't be very anxious  
about me, if I go again. The revolutions  
are in other States than Chihuahua; and  
the international troubles must soon be  
amicably arranged, I believe.

Yours faithfully,

L. G. Pringle.

Cicilualana.

19. Sept., 1856.

Dear Mr. Fourness,

I rejoiced the other day to read your kind letter of August 24th forwarded to me here on Frid. I presume that he in writing you informed you of my sitting out the third time in Mexico and of my good assistant of last year bearing me company.

We have been here three weeks, and are having fair success, though vegetation is only about half as vigorous as last year. It is very different as respects species and their behavior. In the U.S. every plant flowers year on year near a certain date; here everything depends upon the

rains, which are as fickle as fortune.

The other day we went by train to Masula a bare bone station on the plain fourteen miles to the south; thence a walk of three hours brought us to the highest peak of the Santa Catalina mts., a vast chaos of pinnacles and cliffs, which I barely reached at the close of last season, but did not explore. This time we were able to spend some three hours there before returning to the evening train home; and on the north wall of the great peak I found two ferns not collected by me before. Here I send bits for names. The *Philanthus* seems not to agree with my recollection of *C. leucipora*.

Geronimo now being captive it is hoped, that the terrible Apache scourge inflicted on these regions since their earliest settlement (time has come when it was unsafe for Mexicans 15 or 20 miles beyond the limits of this city,) is at an end; if so, there is

a rich and vast region opened to exploration; and I hope following years will compensate for the disappointment and losses of this.

From the inhabitants of northern and western Chihuahua there is little danger. Hundreds of Americans are travelling and living in the region in safety.

There is much here now both typhoid and malarial; so we have to exercise care.

Only a few weeks remain till the close of the season. Still planning a trip to the Sierra Madre, the poor Mexican fare about the ~~the~~ only Coyote now; if I go, I aim for a wonderful canyon and its ferns.

Glad you had a good vacation. Go, our-door life would be the thing for you. Can it be planned?

Hoping to get a letter again soon while here, I remain, Yours faithfully,

C. G. Pringle.

H

Charlotte, Vermont.

6, Dec., 1886.

My dear Mr. Favenport,

Once more it is my sweet  
privilege to write you in haste at the  
<sup>happy</sup> end of another Mexican journey, and  
to send you a few rare birds. In this  
journey everything went well. As I rode  
steep mountains through the warm  
golden days of autumn and gathered  
strange plants I was supremely happy.  
I have never had better health or been  
capable of so much toil. I have gathered  
material for another distribution, if a  
small one, - 125 species for sets and enough  
besides to make some 10,000 specimens.

I trust it is a good omen for another  
year.

I have sent you all my skins, and  
trust you will find me or two of immense  
interest in this lot, as before.

Not another station found for *Amantia*  
*tricholopis*! It surely is here & not *Chim-*  
*ana*. But in the wonderful cañons of the  
Boncos and the *El Estero* shall yet  
be found any quantity of it. I am con-  
fident.

I looked over the collection of a missionary,  
Rev. Mr. Crawford, made at Guad-  
-alajara, where Fr. Primer went last  
July, some I knew; some others of which I  
secured bits for you, not so.

I hope soon to hear from you, and to be  
informed that you are in better health than  
when you addressed me at Michuahua.

And please tell me how much I am in your debt  
for photo. work done this year. I left my camera  
at home this last time. Ours faith fully,  
C. E. Pringle.

H |  
Charlotte, Vermont  
30, Nov., 1887.

My dear Mr. Favenport,

Once more I am safely  
home from botanical travel; and  
I want to hear how it fares with  
you.

I send you the few forms of this  
year's collection. I don't know as I  
saw about the Sierra Madre the strange  
*Chilanthus* of 1886.

I have had a hard year, and  
have got badly into debt. My spring  
trip was a sad failure. My assistant  
fell sick before the end of the journey  
out; and after spending considerable  
time and money doctoring him, I had  
to send him north. He was a ~~man~~ more,  
and could not stand the water  
and climate. There is no telling what

case. I took this leave of us in healthy former son. Next I sent home for my assistant of several previous trips: but soon after his rejoining me I was attacked by ~~was~~ more severely than ever before. No rain nor snow had fallen throughout the winter, scarcely any vegetation had started, and the country was getting dryer and hotter under the summer sun. I came home to change myself a fever. I had wasted \$600 or \$700. I was low in spirits. I did not want botanists to know of my retreat.

I wanted to write you, however, but feared if I should do so, you might be questioned.

Toward the end of August I was travelling back to the mountains 160 miles west of Chihuahua, again well and vigorous, and with a good assistant and a fine outfit of weapons, mules, tent, saddles, etc. We camped for six weeks at the foot of mountains nearly 10000

feet high, ~~amongst~~ pine trees and beside a mountain brook clear and pure. I found myself surrounded by a strange and rich flora, and worked to my utmost to gather everything and make up for the disasters of the spring time. Everything went well, the autumn weather was glorious, and I was supremely happy and secured a fine collection. Frost and cold winds by the end of October drove us away to lower and warmer regions.

Now as usual I have a distribution to make and herbarium work to do. But my first-care is to pay my debts. In this matter Dr. Gray is as kind as a father.

I have a dozen or more photo. plates exposed before trees, etc.; can I please to manage them, or would it be troubling you?

Anxious to hear from you again and  
Faithfully yours,  
E. G. Pringle.

Letter and parcel sent to Medford P.C.  
Pringle.

*Mr. Geo. W. Chapman,  
of Hamilton Ave.,  
Boston.*

8 AM  
8, Hamilton Place,  
Boston,  
Mass.

Charlotte, Vermont.  
22 Dec., 1887.  
Dear J.

Your long and interesting  
letter came last evening.

Oh no! I have no use at  
present for the stereoscopic  
cactus. Keep them longer.

No trouble about the cactus  
when I go to Rochester, I pre-  
sume. Possibly I shall  
very want me to write about  
such plants.

Chit. Mexicana were a  
good name.

From the first I have regarded  
the thing as a very insignificant  
and undescribed species.

Will wait for the form names till  
you are certain.

I feel news about our  
good friend, L. C. W.!

Yours, J. P. J.

O. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Savenport,  
8, Hamilton Place,  
Boston, Mass.

4  
Charlotte, Vermont.

11, Jan., 1888.

Dear Mr. Savenport,

First, thanks for the names of the ferns.

Then: Oys. "it is hard luck". But it is only a little part of the calamities of the spring-time following me up. When driven from my field last spring by drought and fever, I sold to an American photographer in Chicomulco the four dozen fresh plates which I took from Boston last winter. As would not say, these being afraid they were spoiled by age. I have no doubt that the trouble is all with the plates, and now I just want to throw them away and not bother you any more with them. I was

not anxious to have them come out  
all - not so anxious - till Prof.  
Sargent asked me to write these  
articles and said my photographs  
would be just the thing for illustrations.  
I have been anxious to please him  
wishing to make a little return for  
his kindness, and hoping we might  
still meet me in Mexico.

I don't want him to see these,  
lest he think I can do no better in  
future. Perhaps, however, Mr. Charles  
Faxon can manage the matter, and get  
two or three good figures - So, I would  
beg you to send those you speak of; and  
please add two or three mounted views  
of the camp scene. I am glad that  
can serve as a memento of that happy  
trip. Well, if you will fix up as well  
as possible a few of the best forest  
views, I will venture to slip them  
amongst the articles with an explanation.

Will you not keep the stereoscopic  
lenses as a return for the lenses I have  
made you in this matter?

I am toiling and struggling to  
back into my feet again - to remove  
the ills of last spring and my indige-  
stion. I could make another  
journey, and have a good season, I might  
do that - If not, and I should side  
in the attempt, little matter; for there  
is little happiness for me in travel  
or little prospect.

Well, well! I try to bear it cheer-  
fully, and to keep from getting into a con-  
vulsed and desperate state of mind.

Yours faithfully,  
C. G. Pringle.

Charlotte, Vermont.

5<sup>th</sup> May, 1888.

My dear friend,

I am not yet gone, as  
you can see; am waiting for last-pieces  
and papers to come through Prof. Sargent.

Now I wish you would contrib-  
ute four articles to 'Garden and Forest'.  
You could photograph your specimens  
for illustration, and see them reproduced  
beautifully. And I suppose you would  
be liberally paid.

do you see the journal and notice  
some of our photos, reproduced by some  
process which preserves the beauty of  
the photographs?

I am wishing I might have  
a lens by which I could take

pictures of flowers and small plants  
somewhere near life size. How did you  
take the beautiful photographs of *Phil-  
anthus Mexicana*, for instance? I can't  
focus my lens so near. I am wishing  
this, because I am hoping to secure this  
year a great many illustrations for the  
Garden and Forest, which I have come  
to admire much.

I may set out any day. Thanks  
for your advice to call on Mr. Cramer  
which I am planning to adopt—

Yours faithfully,

C. E. Pringle.

Tomorrow I am to become fifty years old!

Charlotte, Vermont.

11, May, 1885.

Dear friend,

Thanks for your letter and  
postcard. Last evening I rec'd again  
from Prof. Sargent, and am expecting  
to start on Monday.

Will now try to leave the  
collodion plates.

No I can't manage my lens for  
natural size views of small things;  
and are much reduced. It would  
be a good thing to have a bellows  
lens; but \$7.50 is too much money for  
me to spare this year.

This is a good Bye from

Yours faithfully,

Next address

Chittenden.

C. G. Pringle.

Charlotte, Vermont.

12, May, 1888.

Dear Mr. Tannest.

I wrote too hurriedly yesterday.  
I could never think of receiving back  
your lens.

Last evening came a letter from  
Miss Turbith; she regrets that she  
cannot see how I look — that I  
did not show myself in the view  
of a Mesquite Forest in Garden and  
Forest; says a friend of hers takes him-  
self in his pictures by means of a string.

Continually asking something of you, my  
tired friend; but sometimes you might  
like to please two of your friends by  
printing two or three photos and sending  
15 her, — say "Left on the desert", Jas-

virion scholars" or "ifteen cents".

Miss F. and I have renewed our correspondence, and are getting more than ever before interested in each other. She is wishing herself young again but she may be a hundred strength; I feel like writing overtures both younger for other reasons - but till!

She tells me that you have visited her home.

I told you next to address Chisholm - for a week or two, then next (probably) Monterey.

I hope you will be able to take a good vacation this summer and get rested.

Yours faithfully,  
C. G. Pringle.

H

1

Philadelphia,

1, June, 1866.

Dear Mr. Leucopart.

Here I am again  
with as many letters of so many  
Mexican journeys, and tomorrow  
expect to start for Monterey.  
My hope is to finish the Mexican  
word in that region in four or  
five weeks, and then make a  
short visit to Guadalajara  
for ferns chiefly — you know  
how many Palmer found there  
in 1846 — over the new branch  
— now completed to that  
city.

In St. Louis I learned we  
have sold about 100 in other

Postage to Mexico from N.Y. only 2 cents now.

... ) that he was to send  
his manuscript a long  
distance out, so, not to lose a day,  
I wrote at once of a black  
man, who came to the  
P.O. 30

I have been exposed to pictures  
again to get a portion of my  
good friends in the Cong. Mission.  
These I have written to send by  
mail, and so Mr. Wright ex-  
pects to send them soon to the  
Paso next week. Will you kindly  
develop them and send two

of each one to Mr. A.  
C. Wright, and write me to  
know any suggestions or  
change of plan? This year I  
must keep trying till I get some  
good pictures -

Yours faithfully,

# with pic. per doz. wanted -

Charlotte, Vermont.

9, Jan., 1889.

My dear friend,

I am happy to write you that I am home again once more in excellent health and spirits, and with a large collection.

I think I wrote you last from Chikamauna before starting for the western Sierra Madre. Arrived there I found the season well in advance of that of 1887 — closing indeed for most plants and frosts beginning to fall. So there was no encouragement to travel far back among the mountains, as was my intention; and, after gleaning about my old camp for two or three weeks, I moved as swiftly as possible far south to

Guadalajara, a grand and beautiful city within the torrid zone, in whose vicinity were far more species than I could manage and where I lingered till the middle of December. At that date the weather was at its coldest for the region, yet there had been only one slight frost, and I left trees and other plants flowering and to flower throughout the winter with spring-time to begin in February. You cannot be surprised that I left with the hope of returning for the spring flora.

Rev. John Howland and wife of the A. B. C. F. M. of Boston kindly took us into their fine living house and did much to make our stay in Guadalajara pleasant.

I spent most of the time

working a region ~~five~~ <sup>ten</sup> miles northward from the city where the largest river of the country which drains Lake Chapala has cut a chasm 1500 feet deep — The great "Barranca" filled with a semitropical vegetation with plantations of bananas, sugar cane, oranges, pine-apples, etc.

My collection of ferns will show you that the Guadalupe region was even richer in ferns than that of Monterey. Here, as all along my journey I exposed dry-plates for photographs. In the way of a slight-return for favors I did some photographing at the mission, making two exposures for each view and one of each of these Mr. Howland got developed in Guaymas, and obtained very good pictures; so I am encouraged.

to look for good results this year.

Yesterday I packed in one box to send you by express the plates — nearly 80 — and the few specimens, and in my hurry to improve an opportunity to send the box to our distant express-office, I forgot, as I am apt enough to think, to prepay charges on the box. I really do not know as I have done right in imposing upon you so much labor as those plates will involve; yet you seemed by a remark, in a letter, which found me in Chi<sup>c</sup>, to anticipate seeing them come into your hands for development. I am unwilling to trouble you with much expense in the matter, and really ought not myself to indulge in ~~such~~ much more expense upon time (for this photographing has been a constant drain upon my failing

resources.) A good proportion of  
 these are photographs of trees, etc.,  
 made in compliance with a  
 request of Prof. Sargent; and I  
 have thought that in perhaps  
 ought to relieve you of the trouble  
 of ~~kind~~ such and turn them over  
 to his friend Mr. Codman. I am  
 in entire ignorance about your  
 relations with him — whether anything  
 was paid you for the plates supplied  
 to the Garden and Forest. As for  
 myself I am under constant obli-  
 gations to Prof. Sargent, and am  
 glad to serve him in any way.  
 But you must not let me  
 abuse your goodness and patience  
 with my photo work; and I shall  
 not cease to feel uneasy, until  
 you frankly inform me of your  
 expenses on this account, so I may  
 repay you, or until you assure me

as I cannot think you able to do,  
that you have found some way to  
make this business pay its own expenses.

To think of going without my  
camera on my journeys and thus  
unable to secure these interesting  
pictures is unpleasant, quite in-  
tolerable; so I am willing to bear  
this part of the burden of expense —  
one of the least — under which  
I stay, a ~~and~~ toil in the life of a  
collector. But I can't consent to  
"ride a fine horse to death" in this,  
as it certainly looks as though I  
am doing; so, my dear friend,  
let me hear from you a big  
bill, when you are through with  
this job. I hear from Miss Turbick  
and Mrs. Piper that you have  
been very liberal with them.

So much concerning the photo-  
business for this time; concerning

the lens; I wish to beg you to examine  
first the parent without details, that  
I may have the names for the printer  
as early as possible.

Last week I visited our dear  
Mrs. Piper in West-Hutland, whither  
she came a few weeks ago to bury  
our husband. She lost her youngest  
son, too, last summer. She returns  
to live in Boston and vicinity. It  
appears that she was never called  
on you — too humble to intrude  
upon you! The idea! I urged her  
to get into the way of dropping in  
to see you. You would both be  
cheered by this.

My brother's wife sends a dollar and  
begs you to print a few photos — 2 of her  
sons (No 12 she thinks; it is the one in  
which the boy, are sitting on the  
horse-block,) and Nos 1 & 9 of the  
Hewitt house close by.

Have I not - broken forth with  
a flood of words?

Now I hope soon to hear from you,  
my dear friend; and shall trust  
to learn that you and all yours  
are well and happy.

Faithfully yours,

C. G. Pringle.

P.S.

My assistant and I got caught  
with the photo plates in a wreck  
on our way home; I hope you  
will find that the glass escaped  
breakage as happily as we did.

Charlotte, Vermont.

27. Jan., 1889.

Dear Mr. Savenport,

Thanks for so many  
names of ferns.

It would seem that the pinnae of  
the *Aspidiums* are sometimes auricled;  
specimen enclosed. But is *A. falcatum*  
known to grow nearer than the Sand-  
wich Islands?

Yours faithfully,  
C. L. Bringle.

11  
Charlotte, Vermont.

24, March, 1889.

Dear Mr. Sampson:

I have taken great pleasure  
in the views so kindly sent by you.

When you have sent me a full set  
don't fail to tell me what all this business  
has cost you. I feel sure that Prof. Sargent  
will want several of the negatives. I have  
explained that I cannot ask him for pay for  
any such; but I do hope that on account of  
his paper or of the Am. Mus. (if he gets them  
enlarged for that institution,) will offer to pay  
you.

I expect to beg you to finish in best style a  
very few to present to Pres. Wade of your city,  
who is so good to give me passes over his Mex.  
Cent. R.R. I want to show him that there

are large timber trees in Mexico.

My assistant, of six Mexican journeys, Geo. H. Walcott now married in Woodstock, Vermont, will be ordering from you a few views in which he has most interest, such as that of our camp. He is the latter man in that picture. The other, Miss Earle S. Pringle, will surely want some too.

Among the Guadalajara views you will come upon some of the mission. I made two exposures each time, and took out one of the two plates, which Mr. Howland got developed very satisfactorily in that city - excepting one of the whole mission - three pairs. It was hoped you would get a good picture from the other plate.

Then there were promises made by me to several Mexican gentlemen, which I must keep, if certain views turn out well - Are you not tired?

Here are the tickets - Now for my sets.

Yours faithfully,  
C. G. Pringle.

\$4.00 Dues  
Mexican Union

Charbott, Vermont.

16. April, 1889.

My dear Mr. Sturtevant,

I am at last—though with my distribution; and before the week closes may be off on another journey.

So now, for a last word concerning the photos. Thanks for the proofs and list by which I can be guided.

My cousin and assistant of last fall Earl S. Prindle, North Ferrisburgh, Vt., will send you several numbers for views which most-interest him or in which he figures. He is the chap with the white hat—seen so often by the trees.

So, too, I think, will my good assistant on six journeys, Geo. H. Welcome, Woodstock, Vt. You must make them pay expenses or more.

For myself, I will not—burden you to permit.

me pictures from all the plates. I do not care much for many of the trus. And will you not dress up and throw away all such plates as will not print creditable pictures and all the poorer duplicates. Don't give such room.

I beg you to print mount and send here for me at your convenience Nos 29, 30, 36, 37, 43, 48, 49, 50, 52, 54, 56, 58, 60, 61, 67, 68, 69, 70, 23, + 25=

I exposed duplicate plates for the two groups of the Guadalupe missionaria, their school woman and donkey with children, etc and half the plates were at once developed by a photographer of that city. They came out with satisfactory — with the exception of 67. I am confident, if you will print <sup>four</sup> nice pictures from this plate and send <sup>one each</sup> (mounted or unmounted,) to Rev. John Howland, Guadalupe, Mexico, to Rev. Henry M. Bissell, La Barca, Jalisco, Mexico, to Rev. A. C. Wright, Cusihuiriachic, Chihuahua, Mexico, and to

✓ Rev. Mr. Grimes, San Luis Potosi, Mexico.  
with price per dozen, that these gentlemen  
will order.

The first three (they show in the picture in  
the order in which I have given their names  
above beginning at the left or next the  
pillar) are missionaries of the A. B. C. F. M.  
of Boston and I should think this picture as  
well as that of their school at Iguala (No. 66)  
and the court-scene (No. 68) would  
sell at the rooms of this missionary society.

Please, also, finish up one or two of the  
best of the views of ~~the~~ the house, etc., of Rev.  
✓ James S. Eaton, Chilimalma, Mexico, and  
send him with price per dozen - 32 or 33 and  
61 or 62.

✓ Please, also, send two mounted photos of No. 5-7  
to Sr Don. N. L. Carillo, Chilimalma, Mexico.

✓ And one each of 34 and 35 - (Sambucus  
Mexicana in the garden of the governor of Chi-  
to Sr Don Abraham Najera, Chilimalma, Mexico.

The subject of N-36 is *Populus* in the Alameda of Ciudad Juarez. I thought Mr. Sargent would want it to illustrate the species and its use.

Now I am going to cease, from troubling you — for a while; shall be anxious to hear from you of your health, etc., when I am in the field; and when I find a good place to locate for collecting will tell you when to find me by letter.

I shall probably be near Monterey again for a time or near Saltillo — or San Luis Potosi. There are three of us, one an ornithologist in favor with the Smithsonian; and we are backed by the U.S. and Mex. Gov'ts, and have passed over nearly all the railroads of the republic. So don't fear, for your grateful friend,

C. G. Pringle.

I enclose \$5. will go in St. Louis a few days, examine plates and try to profit by your advice —

Laredo, Texas.

23, July, 1889.

My dear Mr. Sargent,

It is time you had a letter  
from me, just you and my other good  
Boston friends, and I am again glad to  
be able to give you pleasure to report  
myself in the best of health and  
feeling well so far on this journey; though  
I am having my usual trouble with  
the action of the bow string, and  
when I brought out the new one, the  
ornithologist, soon succumbed to the  
and proved inefficient as a bow string  
and sent back with; and now the occasion  
of my being here on the border is to wait  
till the other one, though at first it is  
fair to make the best assistance from

have had, has succeeded in getting a little  
more. My own travels, during my first year  
here and the second, have not been very long  
and being so, I have not been able to  
take a sufficient number of the things  
of which and travelling in this country are  
depending on the work which I have  
undertaken. The long marches and  
travelling (and in some cases his necessary  
supply of food, water, &c., and with him  
sundry collections,) the distance which  
he is travelling is terrific, often passing  
the night, the patient and fatigued, passing  
after rare plants growing on the rocks. The  
obstacles, interposed by the storms peculiar  
to these regions, sometimes by the cold  
and not rarely by the inhabitants of the  
country — all these difficulties are forgotten,  
when the collector gets home at the end  
of the year with his stores of booty, but  
they rise in his way as he enters his field  
again —

I have said I have been successful as the securing of over 6000 specimens already must testify; but the failure of my assistant has prevented my traversing the mountains south of Monterey, as I planned to do. But I have at least been able to find some good birds and have crossed the high rocky high mountains before the day with some good results, as follows.

I have also made two flying trips to the Guadalupe region with a view to securing the vernal vegetation, and I feel some satisfaction over the way I have thus covered the three above districts.

As to your favorites, the ferns, I am report-gathering *Holotheca nigra*, *var. fulva* about-Lima. I hope near Monterey also — I can hardly mistake — *Holotheca* — About Guadalupe, numerous as were the species that there should

Themselves at 10 miles, I was surprised on returning. I saw a species (I think) of the same, but it is the same (which must have disappeared long since before this) and is very suspicious, though when we left town on the 8th inst. still too immature to be collected.

I thought to have been well in good luck, but now I must keep near the border for a week or two longer in the hope of meeting some of the species which I mean to spend most of the remaining months in Jalisco and neighboring states, because there I can collect these species to one near Monterey or in the state of Chihuahua, and after repeated losses numbers of specimens becomes of paramount importance.

I have been prevented by the illness of my men from taking up my mules for a trip to the Sierra Madre of Chihuahua;

for a while. It will be impossible  
to get the state to do anything  
more than to state its policy  
in a few words.

It has a few fine ones  
and ripe; and if I have any left —  
and some green ones — I shall probably  
send a small basket.

For the present I am left to struggle  
alone with these negatives —  
and in the way that I work, it is not well  
that I am so long in coming to show  
them any —

In Guadalajara I was pleased to see the fine picture sent by Mr. Howland. The Howlands are pleased to have me with them in the mission house, and it makes a pleasant home for me.

I am so confident that I shall  
have my case there soon that I ask  
you to address Daniel O'Connell, John Howland,

Grandmother, I am so glad to hear  
I am so good, and I hope you  
can tell me.

I want to know what you think you  
have made of the history of the  
This season I have been so high and some-  
what better, and I hope to be able to  
do so. I am so glad to hear that you  
are so well, and I hope to be able to  
do so. I am so glad to hear that you  
are so well, and I hope to be able to  
do so.

And I don't hear from you  
to this summer. I hope you are well.  
I am so glad to hear that you  
are so well, and I hope to be able to  
do so.

Will you please just send me  
a package of my friends to  
Reg. to you, as you must know for you?

Will you please remain in the same  
place,

Yours faithfully,  
Wm. W. W.

Charlotte, Vermont.

22, Feb., 1890.

Dear Mr. Javenport:

I believe, if I tell you of my trouble in respect to mounting paper, you will be so good as to step around to some paper warehouse at your convenience — is it Carter, Rice, & Co., somewhere in Devonshire St. ? — and learn where I can buy just what I want.

For years I got my supply from a mill in S. Lee, Mass., paying some 18 cents a pound for several reams each year. Last year I had to send elsewhere, because the company had failed. I sent to Washington, and had to pay a higher price. This is a sample. It came from Holyoke. Now I suppose the Holyoke mills are owned or controlled in Boston; and I don't want to pay freight to and from Washington.

I want flat-white paper like this, weighing 25 to 30 pounds per ream, and cut precisely  $11\frac{3}{8}$  by  $16\frac{3}{8}$  inches. It has been intimated that the paper offered for herbarium use at 18 cents a pound is culled paper, that is each sheet has some slight defect. If this is true, I have no reason to complain; for I have seldom rejected a sheet.

Will you kindly tell me where I can send orders for paper as heavy as I use and cut just to my size, and have it matched year by year, and at what price?

So you will help a friend out of a dilemma — yours faithfully,  
C. G. Pringle.

16, March, 1890

Dear friend:

Good for the new Notulae,  
and Thanks to your critical judgment and  
determination for it. More than 50 n. sp. for  
my sets — about one sixth, and I all the  
while following after Dr. Palmer, that "keen  
and careful collector", S.W.

No I have not heard from Miss Furbish,  
but why do you ask? soon I can send tickets.

Yours truly, C. G. Pringle.

A. W. Seymour will loan you a  
copy of paper made for 17 birds.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. E. Starnes,  
8, Hamilton Place,  
Boston,  
Mass.

Charlotte, Vermont.

27, Feb., 1890.

Dear Mr. Tavenport:

It is pleasing to learn that you find so much of interest among my ferns. I thought you might want to send some of them to Eaton or Baker; so I put up duplicates. Sometimes I fear that I am wrong in sending so much work to you. Any time you wish me to send to Prof. Eaton, please tell me.

The *Hemionitis* usually fruits large or small; the shape of sterile and fertile fronds the same. It grows in the great barrens near Gustafsvilla in rich soil of shaded ledges or banks. I got to it late, and secured scarcely

enough material to go around my  
sets!

2599 was found on limestone ledges  
of mountains near Monterey -

I trust you will be able to report names  
for these two and for 2591 soon so I can  
send them to the printer.

Have you heard of the death (in conse-  
quence of the grip) of dear Dr. Parry?

yours faithfully,

C. L. Pringle.

Charlotte, Vermont.

18, March, 1890.

My dear friend:

I am delighted with  
the photo. proofs and must by you  
to print ~~and~~ ~~now~~ for myself, my  
boys and my Maritime friends (G. W. W.)  
as follows:

No 102 (3 photos.)

104 (2 " )

105- (3 " )

✓ 106 (8 " )

✓ 108 (8 " )

109 (2 " )

110 (3 " )

111 (3 " )

112 (4 " )

and send me account of the photo ex-  
penses of last year.

Not long ago you enquired the height  
of North. ridge. It is over 100 feet.

I am to see a good deal this summer  
(D.V.) of the mountain ranges in which  
this and *Aspidium* n. sp. grows especially  
between San Luis Potosi and Tampico  
300 or 400 miles south of Monterey;  
and I trust to get more of both  
plants and other new species of ferns  
besides.

Yours faithfully,  
C. G. Pringle.

Mr. Cleveland of San Diego writes  
that he expects to leave next summer  
and go as far as Maine. He buys plants  
from me more liberally than ever.

Charlotte, Vermont.

4, May, 1890.

My dear friend:

Time flies; and  
tomorrow it is Good Bye to home  
— to mother and friends and way  
into the uncertainties of another long  
journey.

I have asked Edward Catwath  
Esq, of Wilmin (Va), Delaware to send  
you a little money on account of  
the photos.

Please send a bit of time to  
my dear friend, assistant of last  
summer, Chas. C. Hammond,  
Bromfield,  
Windsor Co.,  
Vermont.

another & my assistant of last  
year, Fred. A. Swift.

Sturtevant, Vermont. X

Another to

Geo. H. Welcome, X

Woodstock, Vermont

And the rest to me in Laredo, Tex.

No, I mistake. In this way I may  
fail of getting some of the pictures.

Well, please send to me here a full  
set and then proceed as requested  
above as nearly as you can.

Can you not fit a rest for  
coming summer? You can not  
run as many years longer in this  
way. It pains me, my dear friend,  
to know that you are weary and  
ill.

Next address in Mexico.

Cp Rev. S. W. Grimes,  
San Luis Potosi.

Yours faithfully, C. E. Pringle.

H

San Luis Potosi, Mexico.  
(Departido 92.)

21, June, 1890.

Dear Mr. Liverpool:

Your favor of a long time  
ago with photos was thankfully received,  
and many a time since I have tried  
in vain to find an hour to write  
you. I wanted you to know that I  
am getting well and am progressing  
nicely.

Twice a week, on Tuesdays and  
Fridays at 12.15 P.M. a train leaves  
the city for Tampico, returning  
on Wednesdays and Saturdays  
at 10.45 P.M. Since the first week  
in June I have with my assistant  
been on nearly every train. We

have gone down, seldom to the  
lowlands, but usually to the  
lower mountains, where we could  
avoid near two full days of the  
trip. I was never in so rich a  
region, and now it is raining, the  
and many plants are in condition to  
be gathered. I am trying hard to  
master the vegetation there. Each  
great tree is a garden of ferns  
orchids, etc. I have found there  
— as yet hardly mature, however,  
— some ten ferns unknown to me.

Now I show you a little fern  
collected in the neighborhood  
of Guadalupe last May, which  
seems to me different from Sym-  
plegma leptophylla Sw.

In the hot low rainy country  
we can find little food and little  
shelter — none not infested with  
bad vermin. So we carry our

food, and sleep in our rubber  
coats in railroad tunnels, on mount-  
ain sides, etc. We cannot dry our  
plants in that climate, so we  
go back to this sunny and comparatively  
dry region, visiting Thursdays,  
Sundays and Monday to that city -  
and others, as writing.

I still keep in view my plan  
to getting back to Guadalajara next  
month.

It would be surprising to receive  
a few lines from you, and I hope  
you can tell of better health.

Yours faithfully,

C. L. Bringle

Charlotte, Vermont.

11. Dec., 1890-

My dear friend:

I have just returned in safety and in excellent health from my Mexican journey of 25,000 miles, bringing 20000 specimens - material for more than fifty sets of 300 species.

I am eager to hear from you, for it is a long time since your last letter came to San Luis Potosi.

I have come home earlier than usual, so that I may next year get back into the tropical forests while the trees are yet in flower or fruit - I was much too late last spring -

I did not expect to bring to light for photos, but I have  
much material with the other works. H. J. 111.

and before the intolerable  
heat returns. This is in compliance  
with Prof. Sargent's wish.

So I must make my distribu-  
tion as soon as possible. I  
have about 20 forms for my  
sets, and can get specimens  
ready in a few days. I have thought  
best to ask, if I should send these  
to you. Or, are you going to be too  
tired and too busy during this  
month to give attention to them,  
so that it would be doing you a  
kindness to direct them to Prof.  
Eaton for his determination?  
Of course you would have  
specimens anyhow. Nearly one  
half of the species are Poly-  
pteria.

I write briefly this time, but  
remain Yours faithfully,  
C. G. Pringle.

Charlotte, Vermont.

19. Dec., 1890.

My dear friend:

Two days ago I sent the ferns. You must have them on this, and must have found within the p'ts a lot of the Sierra Madre Aspidium. It is all that I gathered last season. I thought best to send a long list my specimens, large and small, so you could see the plant in all its forms and states. Some of the specimens grew on ledges resting in the crevices of the limestone, others grew in deep rich woods. It is a very common species of the Sierra Madre of eastern Mexico, and is not Aspid. - just leafy-like at all - it is all - it is a collector's mistake to know such distinctive plants. Aspidium Madrone, I am sure, would be a good name for it. Please write what you wish and return the rest. Yours truly, C. G. Fernald.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Cavenpoint,  
8, Hamilton Place,  
Boston,  
Mass.

Charlotte, Vermont.

19 Dec., 1890.

Dear friend:

Thanks for the Photograph  
is Immense. And with your  
fern photo. you give me a  
Sensation. Now I shall be im-  
patient to get back once  
more to Guadalupe, for I  
have but 25 specimens left  
of *Noth. Mallei*, v. *Mexicana*  
— only half enough for my  
sets. I got "*Noth. Grayi*"  
near Chihuahua (No. 463).  
Have you one of these speci-  
mens, so you can tell whether  
it is that species or *N. Mallei*.  
And do you think this last a  
very good species?

Yours & c. C. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Townsend,  
8 Hamilton Place,  
Boston, Mass.

Charlotte, Vermont.

23 Dec. 1890.

Dear Mr. Ravenhart.

Your postcard concerning  
the Sierra Madre Agave is  
received. Well, I will  
give in, especially since I  
read in "Hortus Sylvensis  
Filicinus" that *A. juncifolium*  
is made to include  
five species of Fournier. And  
perhaps after all it was this  
Sierra Madre plant (very  
likely from Mt. Orizaba,  
which furnished to Lange  
his type. My *Chilomena*  
and *Arizona speciosa*, thin-  
ner in texture, with broader  
pinnae and so sparser - tooth-  
ed, being best to collect  
an extreme form of a variable  
species. I am a conservationist.

Mr. Geo. C. Javenport,  
8, Hamilton Place,  
Boston, Mass.

Charlotte,

30, Dec., 1890.

My dear friend:

I am glad to hear from you so favorably.

As your judge, it is probably best to submit *The Polyglossine* to Mr. Baker. I do not hear from Mr. Watson of late; so do not know when to expect his list of determinations.

There may be time to fix the name from now, before I begin marking up my sets. Dr. Britton had to send some sedges to New a week or two ago.

*The Animum* was a surprise to me, so close to *A. Min.* in appearance yet so distinct in characters. I could not refer it to any of the sp. Came near losing it behind; must make another trip to find it.  
Yours C. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE

*Mr. Geo. C. Sampson,  
8, Hamilton Place,  
Boston, Mass.*

14  
Charlotte, Vermont,

6, Jan., 1891.

Dear Mr. Savenport:

On New Year's day I reached home again in perfect health, bringing as large and rich a collection as ever; and I lost no time in putting into your hands the remaining firms of the collection. And I have remembered your wish to have more specimens of our new species, Hottotolana rigida, Savenport, however, you will not find in the package to go by mail with this, because I did not visit the Monterey region on this last journey.

I anticipate much pleasure from the reading of your firm papers in Garden and Forest. As yet I have not had time to find them. I hope this will find you well and

happy, and remains,

Yours faithfully,

E. G. Ringle.

R.

Will you please give me the present  
address of Prof. L. M. Underwood.

I have a strange *Lycopodium* in  
my collection.

Charlotte, Vermont.

8, Jan., 1891.

Dear Mr. Sargent:

Last evening I was delighted<sup>7</sup>  
to receive your list of fern determinations; but  
I must trouble you farther, for I find no  
mention of Nos 335-6 or 335-7 (which are the  
same plant-) 335-8 (is this *Polypodium elonga-*  
*tum*, Swartz?) or 335-9.

Can it be that I did not send you these  
three ferns?

As there is time (Mr. Watson's determinations  
not having come to hand yet-) I will wait-  
till you hear from Prof. Eaton respecting  
No 335-5, before printing the ticket.

335-1 did I not give this correctly as  
335-1?

Here I enclose 335-8 (*Stachys*) and 335-6  
(pinnate *Polypody*) and 335-9 (is this *Pteris*?)

Yours faithfully,

C. G. Pringle.

Charlotte, Vermont.

H 12, Jan., 1891.

My dear friend:

I cannot understand how the two ferns, 3356 & 3357, failed to go to you, unless they got into some bundle making up at the same time for Mr. Watson or someone else.

However I now send you both specimens for study and keeping. These two are for you.

Yours faithfully,

C. G. Tripple.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. E. Jayne  
8, Hamilton Place,  
Boston, Mass.

L  
Charlotte, Vermont.

25<sup>th</sup>, Jan., 1891.

Dear Mr. Tavenport.

I thank you for your long letter. It is just what I have been wanting. More than once amidst my busy hours the desire has come to me to ask you about Mr. Marrow. You have anticipated in the fullest measure my requests; and I shall govern myself by the information which you give me. Too bad!

I forgive all their discords and all this rivalry, before Dr. Gray's death; and on my last visit to him expressed my feelings. And now the calm confidence thrown down by Dr. Gray is assuring. "After a war gone," he said, "there will be one here who is a strong man." To that man, as to a kind older brother, I

are found to be loyal for Dr. Gray's sake  
and by reason of his own wisdom  
and nobility of mind.

I don't know as your varieties  
name for the *Platanus longifolia* will  
serve for my distributions. Did I not  
send you two large specimens? If both  
show the bipinnate character, I make  
a mistake. That character is an extreme  
one only shown by the most luxuriant  
plants of the region. The most of my  
specimens are simply pinnate like the  
first little frond sent you, only much  
larger. What can I do? Mr. Watson's way  
in such cases is to write the name thus:  
"*Platanus longifolia*, L., var." I suppose all  
the specimens show extreme variation  
in shaginess.

I believe the *Aspidium* is diagnosed  
of in the right way. This eastern form  
is quite likely the type.

Yours faithfully,

C. L. Thompson

Charlotte, Vermont.

24, Feb., 1891.

My dear friend:

Here are the tickets  
for your four specimens. If any are  
lacking, or ~~any~~ fuller information<sup>is</sup> desired,  
please let me know.

It was kind of you to give me  
a pup into your study.

I have not yet begun the dreadfully  
inconvenient task of making up my sets. Yet I  
hear from San Luis Potosi that the trees  
are in full leaf there. However there  
remains many a long month ere the  
end of the year.

Yours faithfully,

C. G. Pringle.

Charlotte, Vermont.

16, Jan., 1892.

Dear Mr. Sampson,

I am glad to hear from you once more, and thank you for the first paper, though I have the Garden and Forest regularly and never read them. I thought it strange that you should change to Nyctochloa.

My own contributions to G. & F. have sometimes been edited in the way you complain of; I have supposed it was done by the New York editor, Mr. Stiles.

Of the Achrosticum I found in the barrens of Cas Canoe, State of San Luis Potosi, amongst willows and cypress bushes, only three or four plants. Its culm is a few inches high, quite like that of Cyncha struthopteris; the fronds are erect, four or five feet high, all mature ones fruiting at the top as

shown by the specimens.

Oh, yes. I am so rich in firm, that I shall never miss the specimens you find in your package - I gathered them for you. I aim to secure about 100 specimens of each firm collected nowadays - so my supply will not run out.

I have been distressed over the illness of Dr. Weston, whom I have ever most highly regard as a strong man with a promise of long life. Now, we could accomplish all the work which was given him, and must be prepared to lose him at any time. And what could I do without him?

Yours faithfully,

C. G. Pringle.

\* *Gymnogramme bryobala*

Dear friend,

29, June, 1892.

Dear friend,

Thank you very much for  
your report on the survey  
of my work.

Yes, we note, relative to  
the two specimens of  
*Agrostis* (number 1 & 2) -  
carefully one, first enough  
for all. You will want to  
send me specimens to Prof.  
Lindley, I suppose.

Of *Polygodium* 4007 I take  
only two specimens -  
as above. For it for a pair  
of *P. andersonii*.

Yours,

C. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE

Mr. Geo. E. Jamnport,  
67 Valley St.,  
Medford, Mass.

H

1

Charlotte,

1, May, 1872.

Dear Mr. Saccubant,

I have decided  
to put by for another distribution  
all plants of my last collection  
not fully determined, and to make  
up my site according to this list,  
so that I can get away on another  
Mexican journey within two or  
three weeks.

I think I send herewith tickets  
for all the specimens sent you -

You will be so good as to write  
me, before I go. Please tell me the  
news from Miss Kate Furbish -

Yours faithfully,

C. G. Pringle.

H

Charlotte, Vermont.

23, May, 1892.

Dear Mr. Javenport:

Then I made a blunder in writing "*Polypodium ensifolium*, Willd." above the other names and am sorry for it.

I believe the two fronds of *Polypodium petiolatum*, were alike in character if not in size. Mine is 10 inches broad by 16 inches long on a stipe 7 inches long. It has 28 pinnae besides the terminab one; these are <sup>alternately</sup> 4 to 6 inches long by 3 to 5-lines wide.

I looked for more plants (somewhat hurriedly,) and in vain; but shall hope to get it for you this year, though it grows on mountains infested by tigers.

If I get many ferns this year,

I shall have to push further southward; for I have a clue to only one or two strange ones beside this.

By the storm - and another cause I am hindered from starting on my journey today. Possibly may not leave this week.

If firms turn up, I shall wish to push them early into your hands for study.

I leave with you my kindest wishes, and remain

Yours faithfully,  
C. L. Pringle.

11 San Luis Potosi,

29. Nov., 1892.

Dear friend:

In Guadalajara a short time ago I was surprised to hear of your anxiety concerning me, and now returned here I have your letter of the 27th inst.

At the beginning of the season I was straitened by the failure and return of one of my assistants, and since have had to crowd so incessantly to secure a good collection, that letters were neglected as much as possible. As I have secured but very few from this season, I must think that I shall have to go down to the coast-region or far to the south for more — but not this year. Hope to turn however in two weeks —

Yours faithfully, C. G. Pringle.

INION POSTALE UNIVERSELLE

Charlotte, Vermont.

5. Jan., 1893.

My dear friend;

Thanks for your  
New Years greeting.

On Christmas morning I  
got home from my eight to Mex-  
ican journey in excellent health,  
and here at last I send you  
the few forms of my collection.  
They are few because I did not  
descend much into the lowlands.  
On the highlands of Michoacan,  
where I spent much of the time,  
I had already collected the forms  
and on the mountains of the  
State of Mexico, where I worked  
nearly all the rest of the season,  
I found only those to interest  
me. Did you ever find names  
for 3825 and 3957 of last year?

Yours faithfully,  
Chas. G. Pringle.

POSTAL CARD ONE CENT.

United States America

THIS SIDE IS FOR ADDRESS ONLY.

Mr. Geo. E. Tannenpost  
67, Valley St.  
Medford, Mass.

14 /  
Charlotte, Vermont.

13, March, 1893.

Dear Mr. Davenport:

Polypodium petiolatum was found on the branches of oaks on the mountain sides about the station of Las Canoas in the eastern part of the State of San Luis Potosi. This must have been near the limit of its distribution — certainly on the western limit and near the dry region, where ferns cannot grow on trees — for I searched somewhat widely, and found only the two specimens.

I send on mine, and the tickets.

Yours faithfully,  
C. G. Pringle.

Charlotte, Vermont.

19, Dec., 1893.

Dear Mr. Savenport:

Once more I am home safe and well from my Mexican travel, and with my usual collections. So, I send you the ferns, though they are few, so few as to disappoint you, doubtless. This is owing to my having kept to Jalisco most of the season and to my being handicapped by poor help. In May I got into a good region for ferns about the Colima Mts., as you can see. It was my intention to return there for ferns, etc., in autumn — the season for ferns — but my assistants were too much

It is the names of the two species of *Lychnis* common which I must  
for the printer. Is the tiny one *L. Elaeagnifolia*? I am to visit Cam-bridge  
Jan. 1st, 1888.

of a burden; so, instead, I came home early to unload.

If, as I think, I send you Hott.  
Grayi, it must be from an extreme southerly station — much farther south than before recorded. It was 50 miles west from Guadalupe, where H. Schaffner rather than this species is common.

By the way when I compared these plants with my hb. specimens I came upon an unnumbered specimen of Palmer's Batopilas (S-W. Chihuahua) collection, 1384, 1888, which is densely tomentose beneath. It is ticked "H. Grayi", but Eaton makes no mention of it in his report. It may be worth while to look it up in Camb. Herb. With the wishes of the season I remain, Yours faithfully,  
C. L. Fernald.

Charlotte, N.C.

18, Feb., 1894.

Dear friend:

Shall I distribute 4420  
as a variety of *Gymnogramma* *Eu-*  
*robryana*; and, if so, have you  
a suitable name? As it grows on  
cliffs, muralis would be fitting.

Yours affly, C. E. Pingle

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. E. Favenport,  
8, Hamilton Place,  
Boston.

Charlotte, Vermont

18, March, 1894.

Dear Mr. Davenport:

I was delighted to get your letter of Feb, 27th and see how well you had made out in naming the difficult forms. And here are the tickets — as many as printed. I am sorry I can hardly send you any more specimens. I sent you more than half of my material of 5534, *Asplen<sup>m</sup> punctatum* Swartz, var. *laciniatum*, Davenport, all of that of 5531, *Asplen<sup>m</sup> cicutarium*, Sw., var. *paleaceum*, Davenport; and of 4420 I have had to divide specimens too small to make them go around my distribution.

Yes, I believe you have received all the forms collected by me —

3920 *Asplenium hastatum*, 1891.

Now may I ask a favor? Dr. Goodale wishes me to take photo-

graphs for his museum. He proposed to furnish me with a wide-angle lens for near work on fruits, flowers, etc.; but I hear nothing from him, and he may have forgotten the matter.

My camera is in Guadalajara, and you can tell better than I the size of lens it requires. Are there many sizes? Do I need to buy some new innovations in the way of a camera, or will mine still serve about as well. I would not like to incur the expense of a new one unless it is advisable. Will you kindly tell me the cost of such a lens, as I need, and advise about plates or films and their cost, and say if you will buy for me, if I send the needed amount?

Yours faithfully,  
C. L. Pringle -

Have begun making up my sets, and hope to start on my tenth journey in two or three weeks -

Charlotte,

28-, March, 1894.

Dear Mr. Davenport:

Here are the tickets  
needed by you - I am glad to  
hear your judgement concerning  
the two species of *Trichomanes*.

From Cambridge I now hear  
~~that~~ Dr. Goodale has ready  
for me both a camera and  
lens.

Yours faithfully,  
C. G. Pringle -

Charlotte, Vermont.

12, March, 1895.

My dear friend:

It was not till the  
1st inst that we reached home.  
All right except for a tough  
fight with malaria, now sub-  
dued.

Did you think I got but few  
ferns? The last month was  
spent about Orizaba on a  
grand fern-hunt - as the  
package I now send to your  
home address by mail may  
show you. Those without tickets  
are for sale; will you kindly  
give attention to these first,  
so I can send the names to  
the printer?

The region about the base of Mt. Orizaba is a wonderful place for ferns. I only began on them, and hope to return to secure them all.

I am desolate in my home, having to mourn the loss of my precious mother afresh.

Yours faithfully,  
C. G. Pringle

Charlotte, Vermont.

21, April, 1895.

Dear friend:

Thanks for the pro-  
nouns. As respects the *Aspidium*  
*Phlegmaria* and *Gleichenia* un-  
determined by you, I think  
there remains still a month  
or more ere the nouns all  
come in from Cambridge so  
I can finish printing tickets;  
and in that time some light-  
may come to you on them -  
or I lay them over for another  
year -

Yes, Mr. F. H. Horsford is  
operating his nursery very much,  
and can, I think, supply al-  
most any plant.

Dr. Trelease writes that you

did not find a negative of  
Agave *Stuebelianum*. I am  
not able to say positively that  
I ever photographed the plant,  
but an impression that I did  
remains with me. I did not  
know the name till recently,  
so that name does not accom-  
pany the plate. You can doubtless  
remember if you saw in looking  
over the negatives one of a very  
stout Agave with stems as thick  
as one's leg and some fifteen  
feet high and with leaves  
but two feet long, very broad  
and succulent. I can scarce-  
ly hope there is such a plate to  
be found.

I have 1500 sheets yet to  
mount and my vest distributed  
to several. Yours faithfully,  
C. G. Freyer.

Charlotte, Vermont.

26, May, 1895.

Dear Mr. Davenport.

It was the first time I have failed to see you when in Boston. I told you how it happened, and, I believe, how I was to start back on another Mexican journey as soon as I get my distributions made - very soon I must take such plants as are fully named and make them up into sets, letting the unnamed ones lie over till another year.

So, I wanted to ask if you gave up the *Aspidiums* and the *Phlegmaria*, and the *Gleichenia*, nos. 6077, 6132 and 6129. As these were growing close by

the ~~is~~ of Orizaba, so often  
visited by collectors I thought  
they must be well known  
species.

And I wanted to tell you  
how I have the old home all  
my own now, how the plantations  
of this home grow steadily since  
your visit a dozen years ago, and  
how (but not alas!) I am  
isolated here and half sick  
from mourning for my  
precious mother, as I have  
put away her things to make  
room for the stranger who  
has come to take care of the  
house in my absence.

Yours faithfully,  
C. G. Pringle.

Charlotte, Vermont.

28, July, 1895-

My dear friend:

Accept my sincere  
thanks for the photographs of my  
deceased mother so thoughtfully  
made for me. They will help to  
keep fresh the thousand precious  
memories of her which I treasure,  
which I cannot hope to find  
ever one to comfort and console  
me in her stead.

I am happy to be able to send  
in a package by the same mail  
the fern specimens you need.  
It gives me pleasure to hear that  
you are getting along so well in  
the nursing of my ferns.

Now I am near the end of my  
distribution, and may be setting  
out for Mexico again after two weeks.

Yours faithfully,

C. G. Pringle.

Mexico City,

24, Nov, 1895=

My dear friend:

Barrying some rheumatism I am well and prospering as usual. Have just come from working the region of Cuernavaca 40 miles south of here. There I found three ferns strange to me. I don't know what this gold fern can be unless *Chilanthum aurantiacum* (or *C. ochraceum* of Species Filicium,) though it does not agree with the description very well. As far as I know that species has only been collected once and that by Hartweg near Morelia in the same zone with Cuernavaca.

The little *Asplenium* I trust

you will find to be new,  
and call perhaps *E. fibrillo-*  
*sum*. Note the fibrillose scales  
on the stipe and rachis and  
the fibrillose-lacinate indivi-  
duals, so distinct. It is a  
tiny plant and must be rare  
in its distribution. The other  
form is a *Cepidium* with  
aspect of *C. marginale*.

I hope this will find you  
well and happy. And I should  
be glad to hear that some in  
Cayaca.

Can't tell yet when I will  
be returning home. Am tempted  
to go when the end of the year  
comes.

Yours faithfully,  
C. S. Dring.

Charlotte, Vermont,

7 Jan., 1896.

My dear friend:

Once more I send you greeting from my home. The warm, bright skies of the Mexican tablelands tempted me to stay on through the winter; but the fear that, if should do so, I might not get afield again earlier than I did last year decided me to come home and make my distribution as early as possible. But what a black welcome Vermont is giving me! I got quite free from rheumatism, and have been in perfect health since.

And in fine spirits, only no glad greeting from my precious mother, and my heart is desolate.

I am eager to hear how it fares with you. And did you receive a letter from me some weeks ago enclosing bits of two forms? I have better specimens and at least our other species to send

you for name soon. And the forms  
not distributed last summer - I  
believe you wrote that you had at last  
made them out. I would like to send  
the tickets to the printer.

Yours faithfully,  
C. B. Pringle.

Charlotte, Vermont.

3, Feb., 1896.

Dear Mr. Sampson:

I was here from my examination of fresh specimens, as I felt that it was an *Aspidium*, and so marked the package. Now, upon a close inspection of many specimens it seems clearly that we have here with little doubt the *Aspidium*. It is very peculiar, under the first lens I have appearing like a woody body, and in some little like the leaf of the plant with numerous planes. It was growing in a peculiar situation - in various places on the side of a cliff of limestone, to the package. I think I shall find no other *Aspidium* in the lot, and so have

escaped the notice of earlier explorers  
of the much explored region.

Not far from No. 6190, while going along  
the left bank of the river, there is  
another small lake.

I suspect you will find it to be  
quite different from that it has been  
but much more inclosed. On the other  
corner of the lake, at the top, the

large, deep, and broad lake.

By the way, I am not at all sure.

How to answer the question of your

earlier letter. I have no doubt that

than 4-5 feet. I have no doubt that

the size of the lake is large, and is

a lake with many shallow, with

very shallow.

At this little lake, I have no doubt

in all the way, I have no doubt

that the lake is open, and is

located in the middle of the lake.

P.S.

I have to thank you for calling my attention to the matter of *Aspidium* *minimum*. I must have got badly mixed on this and the opposite side. I have known of both going about equal stages - I remember those narrow fronds - I only collected a few not enough for sets. I think I must have sent them out badly as *Aspidium* *minimum*. I'd not meant on the right, (I know not why) and cannot find as I have not left any of my duplicates - I'll not lose the plants, when again in that field, I am there.

W. H. P.

Charlotte, Vermont.

15, Feb. 1896.

Dear Mr. Macomber:

No. 5768 I first saw in  
the spring of 1894 growing in north  
west up on the Grand Pigeon.  
It was then I was going to collect, &  
the next autumn I was on purpose to  
be on the place, because the plants  
were upon me and passing down  
I found the right place. Only to find  
it was not there. Last October,  
however, when I was in the same mountain  
since I came upon a plant. The plant  
was not the same as the one I had  
seen the first time. I was not  
I don't know as I can look up to it.  
To find the plant, it is upon the same

specimens. The only one I have seen  
 of it now is a small one, and I have  
 a full set for type specimens.

6170 - *Asplenium subaequalis*,  
 what I mean I have seen  
 some of them in the  
 Journal. The specimens  
 there are very good. I have  
 not seen the *Asplenium* *subaequalis*,  
 but I have seen some of them.

6191 - Well, I will try my best to  
 send you a good specimen  
 of the same. My description  
 is as follows:

*Asplenium* *subaequalis* ~~var.~~ <sup>Gracupost.</sup>

— No, let me discover the new species  
 and leave to you their description.  
 I like the arrangement of the

Yours faithfully,  
 C. G. Riple.

Charlotte, N.C., Dec. 17, 1876.

Dear Mr. Sargent;

*Aspidium striatum*, Sargent  
is similar and *Aspidium Scabrum* is  
pretty near it. *Scabrum* is really round,  
so, if you will be so kind, I will be  
the first to name for it. I have

I have no root of *Aspidium*  
*aculeatum*, var. no. 6116; and thinking  
it was like the root of the species

Yours truly,

C. D. Pringle.

Dear Briggs, 5, Feb. 1844

Dear Sir, I have been told that you  
are now in the city, and I am glad to hear  
of it. I hope you are well.

I wish you had been here before  
but, if this was not possible, I am  
glad you are now here, and I am  
glad to hear of it. I am glad to hear  
of it.

Yours faithfully,  
C. C. Briggs.

P.S.

I have passed through a very  
interesting time. You may remember that  
the family of the housekeeper, who was  
my cousin, and I was with us. Now the housekeeper is her daughter, a girl  
of eighteen, but from my cousin.

V .  
Charlotte, Vermont:

28, March, 1896.

My dear friend:

Your reasons for publishing  
the new form at once outweigh  
mine for delaying. Mr. Nelson  
is likely to mint with it; had he  
been taking form when with me on  
San Felipe he might have got it  
there.

And Fink — I had not heard  
of him before. Will you kindly tell  
me who he is, where from, and  
where in Mexico he has been collecting?  
And where do his plants go to be  
named? And does he collect in  
large quantities?

Yours affly,  
C. G. Phipps.

Charlotte, Vermont.

25. April, 1876.

Dear Mr. Brewster:

Constantly overlooking  
as it would, since I came home  
from Texas I have at last  
managed to get with me  
some of something distinctive —  
the most loaded of all my loads.  
but this was not a long one.

It is not I am able to send  
you better — I believe I can give  
you of the present day.

Now I hope to be present on  
my 12th Mexican journey in  
about two weeks —

I am not anxious to leave  
before this season, as I have  
hope to see you in the summer.

Yours faithfully,

Wm. Brewster

Charlotte, Vermont.

29. July, 1896.

My dear friend:

Once more I am home from Mexico in good health and with a large collection — but only a single fawn for my sets! I kept within fifty miles of the City of Mexico nearly all the season. So, I am sending you along with this only three of four fawns. Will you kindly give me the name of the large *Aerostichus* as soon as convenient so I may print tickets? Earlier collectors have found about Cuernavaca two or three species of *Pellaea*, which I can't yet find. I found one *Pellaea*

from that region, which can be no  
other than *P. Sumani*. If really so, I  
am surprised that it was not seen there  
before, for it is abundant on the lava  
beds six miles east of Cuernavaca. Is  
it possible that this has been called  
something else? On these lava beds *Hem-*  
*ionitis elegans* is abundant also —  
within fifty miles of Mexico City!

An Indian revolt in Oaxaca in the  
spring deterred me from going there  
early after more material of your  
new forms. I shall hope to do them justice  
next year.

Hoping to hear that you are well  
prosperous and happy, I remain,  
Yours faithfully,

C. G. Tringali.

Charlotte, Vermont.

13, Jan, 1877.

Dear Mr. Maccupport;

I must turn over to you the question of Mr. Gilbert. He wished to get my Mexican ferns, and I sent him some 80 ferns and fern allies with which he was greatly pleased, sending me in return a package of his Jamaica ferns. You will probably correspond with him directly in this matter.

Did it seem incredible that I should gather so few ferns each season. I was on old ground too much; got scarcely anything which was new to you.

It does not seem as though I am to be invited to visit Harvard this winter, and I am still hopeful of getting

come into the field very early -

Yours faithfully

W. H. Wright

11

Charlotte, Vermont.

25 April, 1892

My dear friend:

It is some time  
I have not said to you this  
season. I have just finished  
making up my book for  
the spring. I have added  
a little to it - considerably  
in some places -  
since the first of March. I  
have mounted - say 3500  
specimens, up to myself, and  
and many others. And  
I am still going.

Remember I have to making  
my collection - 5000 of 300  
species each. Next - kind pre-  
paration and away on my  
13th Mexican journey. I go  
to go early to Mexico to join a

since I went there, Prof. E.  
Cougall of the State Normal School,  
on a trip through the whole Indian  
Country to the North-east of that  
city. As Prof. Cougall, whom I  
like, offers me good quarters in  
his house, I may spend much  
of the season in that state.

I enclose a letter which  
will explain itself. Will you

this man and his business  
methods? I ought to drop him, and  
I am not sure I don't.

Very truly  
yours

Wm. H. Miller,  
Giddings,  
Iowa

Charlotte, Vermont.

24, May, 1897.

My dear friend:

I expect to set out on  
my Thirtieth Anniversary journey  
tomorrow, and hope to be in  
Oaxaca during June. So I am  
likely to secure your new Pelham  
and Acrostichum Principis, Jaume.

Yours faithfully,

C. L. Tringali.

11

Charcoal, Vermont.

17, Oct., 1887

Dear Mr. Sargent:

On my last Mexican journey I gathered I believe not a fern specimen! I was all the time in fields previously visited by me, and I left rather early for ferns. I sent a note on a trip to Oaxaca, but it was sorry for the poor climate there, and I am expecting to return there in better season.

My journey went rather hard. On my way out I contracted sciatica and the pain in which I worked the first month, impeded my success. Then I took out a fish assistant, who suffered from malaria every week, so it was well to expose him to sun and hardship. Consequently I had to work alone

in the field; and exerting myself to the utmost I got worn and nervous ill, when it became evident that my assistance should not stay longer in that country, I was obliged to come home with limber and pack. The journey was a tedious one, when I had been home but six days, I took another man and started back. But I found on arriving in El Paso, Texas, that I could not get through by the Mex. Cent. R.R., on which I had passed, because thirty or thirty miles of its line was under water. The ancient lake bottom had filled with water in her floods of unprecedented extent.

Hence I am again at home. My plan is that I make my distribution before winter, and be back in Mexico by New Years to collect in the Tropical Lowlands during the first months of the year.

I am all alone again in this big house, because I have not yet found and engaged an assistant. It is a good thing to be at home and amidst my herbarium with a chance to study and to rest. But here I am often reminded of my loss of my various mother and of other friends; so that Sadness mingles with the joy and comfort of home.

And bereavements follow one after another. The last loss was that of our dear friend, Mrs. Piper. Did you hear of her death, which occurred on the 4th of July? I was not surprised to hear of it; for each of her latest letters was written as though it was to be the last. But a great void was made, and such voids are not to be filled in this world.

I have but a moderate collection  
this year; and shall have to be  
careful about incurring expenses;  
therefore it seems doubtful whether  
I shall visit Boston this season,  
or see you and my other friends  
there.

Because I did not return to  
Carson your letters addressed  
to me there were never received.  
Too bad.

I am wanting to know about  
Schoth. Did he collect for the  
Field Columbian Museum, and  
where? And when?

Yes Charles Smith collected so  
much with me, I am not sur-  
prised that he got some new  
material. Did he get across Stem-  
Pringle? His plants were larger  
than mine. Another species?

Yours faithfully,

C. L. Pringle.

Charlotte, Vermont.

9, March, 1828.

Dear Mr. Townsend.

I thank you for sending  
me an account with samples of  
the firm of Messrs. Conzatti and  
Gonzalez. Prof. Conzatti is a warm  
personal friend of mine. He is  
Director of the State Normal  
School of Oranienburg, and my home,  
when in Germany, is in his house.  
He is a cultured Italian, fair  
and blue eyed and gentle -  
When I was living with him  
last July he told me of owning  
with his brother a plantation  
in the mountains south east of  
Oranienburg, and urged me to

join him in a botanical exploration of that district in November at the time of his vacation from school. It is believed we might find not a few new species there.

When November came, I was home with my sick assistant. So he took with him, at Jussu, Prof. Bongatti, one of his assistant teachers, a young man much interested in botany.

Only a few days ago I received a letter from Mr. Bongatti saying he should anticipate my visiting him again the coming summer. No doubt he will think again of our collecting near

Cordoba; and I am sure I  
 shall hope to succeed in doing so  
 this year; and if I do, I  
 shall have a pleasure to  
 help you to the series desired.  
 I know then, all the moun-  
 tain north of the city of Caraca-  
 'Cerro' (hill) 'de San Felipe'; but,  
 as its elevation is 8,000 feet  
 above the city and 10,500  
 feet above sea level, I thought  
 I ought to write it "Sierra (mountain)  
 de San Felipe", especially as  
 it was in a range called "Sierra  
 de Juarez" and none of the  
 peaks are noticeably higher  
 than this one nearest the city.

Good as Mr. Congatti is and  
 a hard worker as compared  
 with the Mexicans, we would  
 not make him a profitable  
 associate or assistant, if he  
 were free to do so. And he  
 has contemplated changing his  
 profession to naturalist collector.  
 He would recommend me a  
 Mexican assistant from amongst  
 his large acquaintance, if asked  
 to do so; but I could not think of  
 asking him - could not think  
 of depending upon Mexican help  
 or living with such. I had the  
 best one I ever saw, got him  
 to a friend of mine.

It is so awfully difficult  
to find just the right sort  
of a man for my assistant  
in Mexico, I have had them  
and I have not yet had  
what I want. This year I am  
pleased with the one posted  
on the matter.

I am now going to sea with  
my contribution. It will not  
take long. So, I think I will  
get away about April 1st.

If we are to have a war with  
Spain, I wish to go carefully, but  
think I can keep safe among  
or near my good Mexican friends.

Yours faithfully,  
C. S. Briggs

(over)

P.S. Have I told you before  
that I have no unmounted  
specimen of the *Ophioplossa*  
cited by Mrs. Britton? I must  
collect this year the Mexican  
species for distribution -

H

Charlotte, Vermont.

15, June, 1879.

My dear Mrs. Brewster:

I have the pleasure to receive

your letter of the 11th, and to learn that you had  
kindly had in hand the few forms  
of my (Oxford) collection of 1878.  
Before long I shall know what  
you have called them.

But I was pained to learn of the  
death of your sweet daughter. And  
I am now pining over the news  
from my poor daughter - not dead  
as far as I know, but to be a  
suffering invalid till death brings  
relief. She wrote me several  
weeks ago of leaving just some  
out of a hospital where she

underwent much severe and cruel  
treatment - The mischief done's  
easily traced to the folly of her  
mother; and it requires only  
to think that she so well and  
much suffers from that folly.  
She is the wife of a poor man  
that presides on the island  
and the mother of two boys.

A wall of fleshhood keeps  
me from visiting her with the  
fatherly offices which my heart  
prompts.

It was not exactly "ill health"  
which made it seem wise to some  
bodies, but, 'as he worn with  
hard work that I was too near  
falling ill - I now find that I  
suffer the least work too soon.

But have no fear for me; I shall get recuperated and be eager to return to my field in two months.

I enjoyed most of my journey exceedingly. The Salapa region is beautiful all winter, my month with June in Vermont. I took in a lot of Doctaphants which had been found in that zone between the edge of the tableland and the coast, and of these I got less than 1800. You see, I can spend several winters there. Almost constant rains began with June, and as yet the tablelands are brown and thirsty. It was the best time of year for me to come

home to make a distribution.  
When I return and towards winter  
I shall expect to get you many  
ferns not now in good con-  
dition.

During my last month I  
enjoyed the company of Dr. J. N. Rose  
and his companion, Dr. Hough,  
also from the National Museum.  
Dr. Rose is a good man, mild  
and gentle in his manners and  
kind of heart.

I have come home to miss  
my precious mother still again.  
But I have in my home a small  
family of good people.

With kindest cheer I remain,

Yours faithfully,  
C. L. Pringle.

H

Charlotte, Vermont.

23, March, 1900.

My dear Mr. Sampson:

Did you hear of my being in Cambridge for four or five days in January and feel that I slighted you in not even calling on you in Hamilton Place?

Dr. Robinson had me there to help him, the college paying my fare, and he kept me constantly at work looking over thirty to forty bundles of Mexican plants to name such as I could recognize at sight.

One evening he took me into Boston to dine with Mr. Emily Williams and met Judge Churchill and Mr. Rand. I had scarcely

an hour at my own disposal, and when Saturday morning came I had to come home. And I had thought I should certainly see you while on the trip - probably spend a night with you in Medford and should probably visit the Arnold Arboretum (which I have near done) and meet Prof Sargent and Mr. Gaxon! This comes of being poor and a hard worked drudge.

I came home in October worn down again by toil fever and rheumatism, and by this am scarcely recovered. But I plan to set out on my sixteenth Mexican journey next week. I dread the journey not a little; but know I must work more carefully. I must be on the down-hill side of life now, and shall reach the bottom

soon enough, if I go slow.

Do not suppose I do not anticipate much pleasure from working again under the bright Mexican skies and gathering that rich flora.

On my autumn trip of only four or five weeks I got no more ferns. Here I send you the tickets for those of my spring trip. I expected you to call no. 8174 a *Cyathia*, because it is a fine tree fern.

I have not heard any news of you since last summer. I trust you are as well and happy as usual.

You can address me here, or direct to "Hotel Buena Vista, Mexico City."

Yours faithfully,  
C. G. Pringle
